NEW QUESTION: 1

How many cables are required to install a 4 node VxRail Model G410 cluster with 1 GbE into a rack?

- A. 4 CAT6 and 8 Twinax network cables
- B. 20 CAT6 network cables
- C. 4 CAT6 and 32 SFP+ connectors, and 16 fiber cables
- D. 4 CAT6 and 16 Twinax network cables

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 2

A company is in the process of configuring their Top of Rack (ToR) switches as a single rack that replicates to a secondary data center with vSphere Replication.

What is a consideration for this configuration?

- A. IPv6 and IPv4 multi-cast should span the entire network in each data center
- B. IPv6 and IPv4 multi-cast traffic does not need to leave the ToR switches
- C. IPv6 and IPv4 multi-cast should be layer-3 routed between data centers
- D. IPv6 and IPv4 multi-cast traffic should span layer-2 between data centers

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 3

A VxRail 7.0.100 environment is managed by the internal vCenter Server. The customer asks the implementation engineer to deploy a new VxRail cluster using the existing vCenter Server.

What should the response of the engineer?

- A. Not supported on VxRail software 7.0.100
- B. Only supported on VxRail software 4.7.xxx
- C. Not supported for internal vCenter Server
- D. Supported by neither the internal vCenter Server nor external vCenter Server

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 4

What is the difference between Compression only and Deduplication and compression on a VxRail vSAN cluster?

- A.** Compression only: Does not require a rolling reformat of the disks when enabled Deduplication and compression: Requires a rolling reformat of the disks when enabled
- B.** Compression only: A failed capacity disk causes the disk group to go offline Deduplication and compression: A failed capacity disk does not impact the entire disk group
- C.** Compression only: Added capacity disk requires a disk group rebuild Deduplication and compression: Added capacity disk does not require a disk group rebuild
- D.** Compression only: A failed capacity disk does not impact the entire disk group Deduplication and compression: A failed capacity disk causes the disk group to go offline

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 5

What is a consideration when performing a VxRail software upgrade from version 4.7.xxx to version 7.0.xxx?

- A.** External vCenter server must be upgraded after the VxRail is upgraded
- B.** vCenter Server requires a temporary IP address on a different subnet before the upgrade
- C.** Secure boot must be enabled on the ESXi hosts for a successful upgrade
- D.** VxRail Manager VM must be changed to the default name to avoid an upgrade failure

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 6

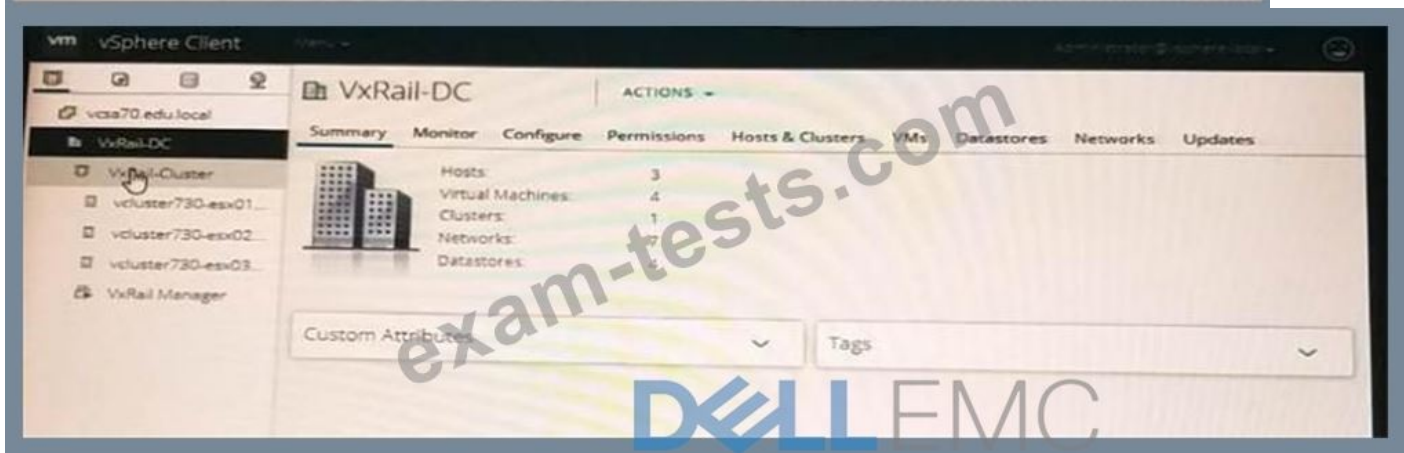

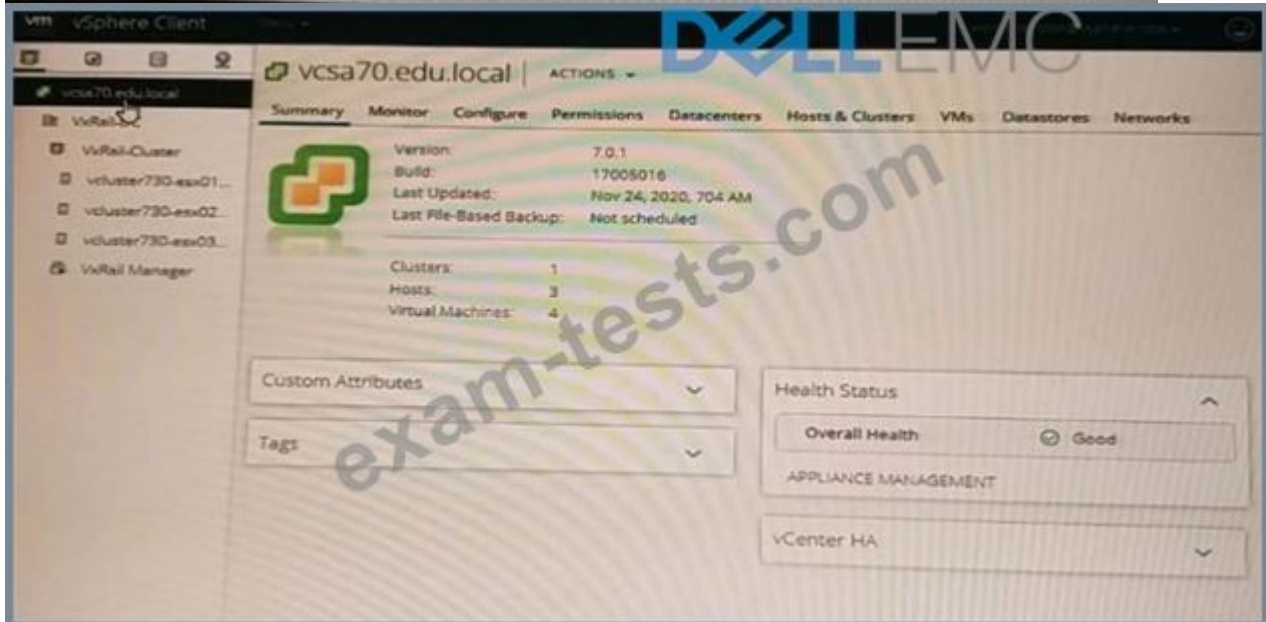

A systems engineer is tasked to configure a VxRail cluster and notices that the VxRail Deployment Wizard fails to launch. The engineer discovers that the software is corrupted. What should the engineer do to address the issue?

- A.** Check vCenter and troubleshoot the build failure
- B.** Use the VMware Host Client and iDRAC to access the nodes for troubleshooting
- C.** Verify that the JSON file is not corrupted and has all the required values
- D.** Return the nodes to the original build state

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 7

NEW QUESTION: 9

What is the correct CLI command to collect only the vCenter logs on VxRail Manager

- A. `vc-support.sh -v`
- B. `generateFullBundle.py -v`
- C. `vc-support-bundle.sh -c`
- D. `generateLogBundle.py -c`

Answer: D (LEAVE A REPLY)

Graphical user interface, text, application Description automatically generated

The `generateLogBundle.py` script is used to collect the log bundles for specific components:

- VxRail Manager: `-v, --vxm`
- vCenter Server: `-c, --vcenter`
- Node-specific bundles - use the `--nodes` option to pick specific nodes
 - ESXi: `-e, --esxi`
 - iDRAC: `-i, --idrac`
 - PT Agent: `-p, --ptagent`

NEW QUESTION: 10

A VxRail Test Plan has been completed.

What is the protocol for recording the results?

- A. With the implementation team, complete each test and document the test date
- B. With the implementation team, complete and document each test, test date, and a screenshot of results
- C. In front of a customer, complete and document each test, test date, and a screenshot of results
- D. In front of a customer, complete each test and document the test date

NEW QUESTION: 11

A company has recently implemented a popular data center monitoring and reporting software solution. They plan to use the solution to consolidate reporting into a single platform.

What is an expected benefit of programmatically gathering VxRail information?

- A. Perform pre-checks for vSAN health
- B. Perform node shutdowns and specific operations
- C. Automate iDRAC firmware management and status
- D. Obtain status of all running operations on a cluster

Answer: (SHOW ANSWER)

NEW QUESTION: 12

Which series of VxRail nodes supports either Intel or AMD processors and either hybrid or All-Flash storage?

- A. G Series
- B. D Series
- C. E Series
- D. V Series

Answer: C (LEAVE A REPLY)

Graphical user interface, text, application Description automatically generated

E Series - Entry Level

The E Series offers a smaller footprint with its [1U1N](#) form factor. Similar to the G Series, the E Series can be successfully deployed anywhere from data center core to edge deployments. The combination of density, disk groups, and balance of resources in a low profile 1U form factor enables it to be deployed for a wide range of use cases.

- [All-flash, all NVMe, or hybrid](#) options available
- Up to 61.44 TB/node capacity available
- [Intel Xeon Scalable Processors](#) or [AMD EPYC 7002 Series Processors](#)
- GPUs optionally available

NEW QUESTION: 13

A VxRail D560 cluster was delivered six months ago and now needs to be prepared for installation with the target code. What is the correct method to complete the task?

- A. Boot into RASR ISO and perform a Factory Reset
- B. Boot into RASR USB and perform a RASR Reset
- C. Boot into RASR ISO and perform a RASR Reset
- D. Boot into SD card and perform a Factory Reset

Answer: C (LEAVE A REPLY)

How should an administrator manually validate the DNS readiness of a customer network?

A. Run a traceroute to the DNS server

B. Generate a Network PEQ

C. Ping the default gateway of the management VLAN

D. Run nslookup on server FQDN and IP

Answer: D (LEAVE A REPLY)

Graphical user interface, text, application Description automatically generated

Confirm DNS Readiness

Most VxRail implementations are deployed with an external DNS. The external DNS must be configured with forward and reverse lookup records for the vCenter Server, ESXi hosts, and the VxRail Manager VM.

Depending on the VxRail deployment, the DNS records must also exist for: the NTP Server, vRealize Log Insight, and Secure Remote Services Gateway. VxRail 2-Node and stretched clusters require valid DNS records for the Witness host.

The nslookup command or the PowerShell equivalent Resolve-DnsName can be used to confirm the existence of the required records.

The FQDN and IP addresses are documented in the VxRail PEQ. Check the DNS records for all the required objects. The records should be verified for both:

- FQDN to IP address—Forward DNS check
- IP address to FQDN—Reverse DNS check

NEW QUESTION: 98

What is a difference between vSAN Data-In-Transit Encryption and vSAN Data-At-Rest-Encryption?

- A. Data-In-Transit Encryption: Encrypts traffic between VMs and the VxRail nodes Data-At-Rest Encryption: Encrypts traffic between VxRail nodes only
- B. Data-In-Transit Encryption: Does not require a Key Management Server Data-At-Rest Encryption: Requires a Key Management Server
- C. Data-In-Transit Encryption: Key Management Server must reside on the vSAN cluster Data-At-Rest Encryption: Key Management Server can reside on the vSAN cluster
- D. Data-In-Transit Encryption: Addresses fear of media theft Data-At-Rest Encryption: Addresses fear of rogue administrators

Answer: B (LEAVE A REPLY)

Table Description automatically generated

vSAN Data-in-Transit Encryption	vSAN Data-At-Rest Encryption (DARE)
Does not require a Key Management Server (KMS). vSAN uses symmetric keys that are generated dynamically and shared between hosts. Hosts generate an encryption key when they establish a connection and they use the key to encrypt all traffic between the hosts.	Requires an external KMS. Click here for a list of compatible KMS. The vCenter Server requests encryption keys from an external KMS. The KMS generates and stores the keys, and the vCenter Server obtains the key IDs from the KMS and distributes them to the ESXi Hosts.

For which typical activity would the Full data migration setting be used when placing a VxRail host into maintenance mode?

- A. Temporary maintenance
- B. Rebooting a single ESXi host
- C. Shutting down an entire cluster
- D. Permanently removing host from cluster

Answer: D (LEAVE A REPLY)

A screenshot of a computer Description automatically generated with medium confidence

There are three data migration options when a host in a vSAN cluster is placed into **maintenance** mode:

- **Ensure accessibility (default)** - vSAN only migrates the components that are essential for running VMs. This option is typically used when taking a host out of the cluster temporarily.
- **Full data migration** - vSAN transfers all the data from this host to the other hosts in the cluster. This option is typically used when **removing a host permanently**.
- **No data migration** - vSAN does not evacuate any data from the host. This option is typically used when shutting down an entire cluster.
