NEW QUESTION: 1

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com.

in the contoso.com domain, you create two users named Admin1 and Admin2.

You need to ensure that the users can perform the following tasks:

- * Admin1 can create and manage Active Directory sites.
- * Admin2 can deploy domain controller to the east.contoso.com domain.

The solution must use the principle of least privilege.

To which group should you add each user? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

Answer:

NEW QUESTION: 2

You need to configure remote administration to meet the security requirements. What should you use?

- A. just in time (JIT) VM access
- B. Azure AD Privileged Identity Management (PIM)
- C. the Remote Desktop extension for Azure Cloud Services
- D. an Azure Bastion host

Answer: (SHOW ANSWER)

Reference:

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/just-in-time-access-usage?tabs=jit-config-asc%2Cjit-request-asc>

NEW QUESTION: 3

You have a Windows Server container host named Server1 that has a single disk.

On Server1, you plan to start the containers shown in the following table.

Which isolation mode can you use for each container? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Reference:

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/manage-containers/hyperv-container>

NEW QUESTION: 4

You have an Azure Active Directory Domain Services (Azure AD DS) domain named contoso.com.

You need to provide an administrator with the ability to manage Group Policy Objects (GPOs). The solution must use the principle of least privilege.

To which group should you add the administrator?

- A. AAD DC Administrators
- B. Domain Admins
- C. Schema Admins
- D. Enterprise Admins
- E. Group Policy Creator Owners

Answer: B (LEAVE A REPLY)

Only the Domain Admins group and the Enterprise Admins group can fully manage GPOs. Members of the Group Policy Creator Owners group can create new GPOs but they can't link the GPOs to sites, the domain or OUs and they cannot manage existing GPOs.

NEW QUESTION: 5

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines. The virtual machines will be joined to Azure AD DS.

You need to deploy Active Directory Domain Services (AD DS) to ensure that the virtual machines can be deployed and joined to Azure AD DS.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

- 1 - Create an Azure ADDS intance.
- 2 - Create an Azure virual network.
- 3 - Run the Active Directory Domain Service installation Wizard.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory-domain-services/tutorial-create-instance>

NEW QUESTION: 6

You need to sync files from an on premises server named Server1 to Azure by using Azure File Sync.

You have a cloud tiering policy that is configured for 30 percent free space and 70 days.

Volume E on Server1 is 500 GB.

A year ago, you configured E:\Data on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Volume E does NOT contain any other files.

Where are File1 and File3 located? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Reference:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-file-sync>

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-cloud-tiering-overview>

NEW QUESTION: 7

You have an on-premises server named Server1 that runs Windows Server. You have an Azure virtual network that contains an Azure virtual network gateway. You need to connect only Server1 to the Azure virtual network. What should you use?

- A. a Site-to-SiteVPN
- B. Azure Extended Network
- C. Azure Network Adapter
- D. an ExpressRoute circuit

Answer: C (LEAVE A REPLY)

NEW QUESTION: 8

You need to meet the security requirements for passwords.

Where should you configure the components for Azure AD Password Protection? To answer, drag the appropriate components to the correct locations. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE Each correct selection is worth one point.

Answer:**NEW QUESTION: 9**

You have a server named Server1 that runs Windows Server. Server1 has the storage pools shown in the following table.

You plan to create a virtual disk named VDisk1 that will use storage tiers. Which pools can you use to create VDisk1 ?

- A. Pool2 and Pool3 only
- B. Pool 2only
- C. Pool only
- D. Pool, Pool2, and Pool3
- E. Pool1 and Pool2 only
- F. Pool1 and Pool3 only
- G. Pool3 only

Answer: A ([LEAVE A REPLY](#))

Storage tiering requires both standard HDDs and SSDs. We cannot use Pool1 because it does not have any SSDs.

NEW QUESTION: 10

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.

You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: You configure Server2 and Server3 to forward DNS requests to 10.0.1.10.

Does this meet the goal?

- A. Yes
- B. No

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 11

Your network contains an Active Directory Domain Services (AD DS) domain.

You have a Group Policy Object (GPO) named GPO1 that contains Group Policy preferences.

You plan to link GPO1 to the domain.

You need to ensure that the preference in GPO1 apply only to domain member servers and NOT to domain controllers or client computers. All the other Group Policy settings in GPO1 must apply to all the computers. The solution must minimize administrative effort.

Which type of item level targeting should you use?

- A. Domain
- B. Operating System
- C. Security Group
- D. Environment Variable

Answer: B (LEAVE A REPLY)

Reference:

[https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2012-r2-and-2012/dn789189\(v=ws.11\)#operating-system-targeting](https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2012-r2-and-2012/dn789189(v=ws.11)#operating-system-targeting)

NEW QUESTION: 12

You have an on-premises server named Server1 that runs Windows Server.
You have an Azure virtual network that contains an Azure virtual network gateway.
You need to connect only Server1 to the Azure virtual network.

What should you use?

- A. Azure Extended Network
- B. an ExpressRoute circuit
- C. a Site-to-SiteVPN
- D. Azure Network Adapter

Answer: D (LEAVE A REPLY)

NEW QUESTION: 13

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. The on-premises network is connected to Azure by using a Site-to-Site VPN. You have the DNS zones shown in the following table. You need to ensure that names from fabrikam.com can be resolved from the on-premises network. Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Deploy an Azure virtual machine that runs Windows Server. Configure the virtual machine as a DNS forwarder.
- B. Deploy an Azure virtual machine that runs Windows Server. Modify the DNS Servers settings for the virtual network.
- C. Create a secondary zone for fabrikam.com on DC1.
- D. Create a stub zone for fabrikam.com on DC1.
- E. Create a conditional forwarder for fabrikam.com on DC1.

Answer: B,D (LEAVE A REPLY)

NEW QUESTION: 14

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a file server named Server1 and three users named User1, User2, and User3.

Server1 contains a shared folder named Share1 that has the following configurations:

The share permissions for Share1 are configured as shown in the Share Permissions exhibit.

Share1 contains a file named File1.txt. The advanced security settings for File1.txt are configured as shown in the File Permissions exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 15

Your network contains two VLANs for client computers and one VLAN for a datacenter. Each VLAN is assigned an IPv4 subnet. Currently, all the client computers use static IP addresses.

You plan to deploy a DHCP server to the VLAN in the datacenter.

You need to use the DHCP server to provide IP configurations to all the client computers.

What is the minimum number of scopes and DHCP relays you should create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Topic 2, Contoso Ltd

AD DS Environment

The network contains an on-premises Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains two domains named contoso.com and canada.contoso.com. The forest contains the domain controllers shown in the following table.

All the domain controllers are global catalog servers.

Server Infrastructure

The network contains the servers shown in the following table.

A server named Server4 runs Windows Server and is in a workgroup. Windows Firewall on Server4 uses the private profile.

Server2 hosts three virtual machines named VM1, VM2, and VM3.

VM3 is a file server that stores data in the volumes shown in the following table.

Group Policies

The contoso.com domain has the Group Policies Objects (GPOs) shown in the following table.

Existing Identities

The forest contains the users shown in the following table.

The forest contains the groups shown in the following table.

Current Problems

When an administrator signs in to the console of VM2 by using Virtual Machine Connection, and then disconnects from the session without signing out another administrator can connect to the console session as the currently signed-in user.

Requirements

Contoso identifies the following technical requirements:

- * Change the replication schedule for all site links to 30 minutes.
- * Promote Server1 to a domain controller in canada.contoso.com.
- * Install and authorize Server3 as a DHCP server.
- * Ensure that User1 can manage the membership of all the groups in Contoso\OU3.
- * Ensure that you can manage Server4 from Server1 by using PowerShell removing.
- * Ensure that you can run virtual machines on VM1.
- * Force users to provide credentials when they connect to VM2.
- * On VM3, ensure that Data Deduplication on all volumes is possible.

NEW QUESTION: 16

Your network contains an Active Directory Domain Services (AD DS) domain named conioso.com.

You need to identify which server is the PDC emulator for the domain.

Solution: from Active Directory Users and Computers, you right-click conioso.com in the console tree, and then select Operations Master Does this meet the goal?

A. No

B. Yes

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 17

You need to configure Azure File Sync to meet the file sharing requirements. What should you do? To answer, select the appropriate options in the answer are

a. NOTE Each correct selection is worth one point.

Answer:

Reference:

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-planning>

NEW QUESTION: 18

Your network contains a single domain Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a single Active Directory site.

You plan to deploy a read only domain controller (RODC) to a new datacenter on a server named Server1. A user named User1 is a member of the local Administrators group on Server1.

You need to recommend a deployment plan that meets the following requirements:

Ensures that a user named User1 can perform the RODC installation on Server1
Ensures that you can control the AD DS replication schedule to the Server1
Ensures that Server1 is in a new site named RemoteSite1
Uses the principle of least privilege
Which three actions should you recommend performing in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

- 1 - Add User1 to the Contoso\Administrators group.
- 2 - Pre-create an RODC account.
- 3 - Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

NEW QUESTION: 19

Your network contains an on -premises Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the objects shown in the following table.

You plan to sync contoso.com with an Azure Active Directory (Azure AD) tenant by using Azure AD Connect. You need to ensure that all the objects can be used in Conditional Access policies. What should you do?

- A. Change the scope of Group2 to Universal
- B. Clear the Configure device writeback option.
- C. Change the scope of Group1 and Group2 to Global
- D. Select the Configure Hybrid Azure AD join option.

Answer: ([SHOW ANSWER](#))

Hybrid Azure AD join needs to be configured to enable Computer1 to be used in Conditional Access Policies. Synchronized users, universal groups and domain local groups can be used in Conditional Access Policies.

NEW QUESTION: 20

You have an Azure virtual machine named VM1 that runs Windows Server. You perform the following actions on VM1:

- * Create a folder named Folder1 on volume C
- * Create a folder named Folder2 on volume D.
- * Add a new data disk to VM1 and create a new volume that is assigned drive letter E.
- * Install an app named App1 on volume E.

You plan to resize VM1.

Which objects will present after you resize VM1 ?

- A. Folder1 only
- B. Folder1 and Folder2 only
- C. Folder1, Folder2, App1, and volume E
- D. Folder1, volume E, and App1 only

Answer: C (LEAVE A REPLY)

NEW QUESTION: 21

You need to configure Azure File Sync to meet the file sharing requirements. What should you do? To answer, select the appropriate options in the answer area. NOTE Each correct selection is worth one point.

Answer:

NEW QUESTION: 22

You have an Azure virtual machine named VM1 that has a private IP address only.

You configure the Windows Admin Center extension on VM1.

You have an on-premises computer that runs Windows 11. You use the computer for server management. You need to ensure that you can use Windows Admin Center from the Azure portal to manage VM1.

What should you configure?

- A. a network security group (NSG) rule that allows inbound traffic on port 443.
- B. a private endpoint on the virtual network that contains VM1.
- C. a VPN connection to the virtual network that contains VM1.
- D. an Azure Bastion host on the virtual network that contains VM1.

Answer: D (LEAVE A REPLY)

NEW QUESTION: 23

You have a file server named Server1 that runs Windows Server and contains the volumes shown in the following table.

On which volumes can you use BitLocker Drive Encryption (BitLocker) and disk quotas?

To answer, select the appropriate options in the answer area. NOTE Each correct selection is worth one point.

Answer:

NEW QUESTION: 24

You need to meet the technical requirements for User1. The solution must use the principle of least privilege.

What should you do?

- A. Add User1 to the Server Operators group in contoso.com.
- B. Create a delegation on contoso.com.
- C. Add User1 to the Account Operators group in contoso.com.

D. Create a delegation on OU3.

Answer: ([SHOW ANSWER](#))

Reference:

<https://docs.microsoft.com/en-us/windows-server/identity/ad-ds/plan/delegating-administration-of-account-ous-and-resource-ous>

Topic 1, Contoso Ltd

AD DS Environment

The network contains an on-premises Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains two domains named contoso.com and canada.contoso.com. The forest contains the domain controllers shown in the following table.

All the domain controllers are global catalog servers.

Server Infrastructure

The network contains the servers shown in the following table.

A server named Server4 runs Windows Server and is in a workgroup. Windows Firewall on Server4 uses the private profile.

Server2 hosts three virtual machines named VM1, VM2, and VM3.

VM3 is a file server that stores data in the volumes shown in the following table.

Group Policies

The contoso.com domain has the Group Policies Objects (GPOs) shown in the following table.

Existing Identities

The forest contains the users shown in the following table.

The forest contains the groups shown in the following table.

Current Problems

When an administrator signs in to the console of VM2 by using Virtual Machine Connection, and then disconnects from the session without signing out another administrator can connect to the console session as the currently signed-in user.

Requirements

Contoso identifies the following technical requirements:

- * Change the replication schedule for all site links to 30 minutes.
- * Promote Server1 to a domain controller in canada.contoso.com.
- * Install and authorize Server3 as a DHCP server.
- * Ensure that User1 can manage the membership of all the groups in Contoso\OU3.
- * Ensure that you can manage Server4 from Server1 by using PowerShell removing.
- * Ensure that you can run virtual machines on VM1.
- * Force users to provide credentials when they connect to VM2.
- * On VM3, ensure that Data Deduplication on all volumes is possible.

NEW QUESTION: 25

You have an Azure subscription that contains the following resources:

- * An Azure Log Analytics workspace
- * An Azure Automation account
- * Azure Arc.

You have an on-premises server named Server1 that is onboarded to Azure Arc. You need to manage Microsoft updates on Server1 by using Azure Arc. Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From the Automation account, enable Update Management for Server1.
- B. Add Microsoft Sentinel to the Log Analytics workspace
- C. On Server1, install the Azure Monitor agent
- D. From the Virtual machines data source of the Log Analytics workspace, connect Server1.

Answer: A,B (LEAVE A REPLY)

NEW QUESTION: 26

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.

You need to identify which server is the PDC emulator for the domain.

Solution: From a command prompt, you run `netdom.exe query fsmo`.

Does this meet the goal?

- A. Yes
- B. No

Answer: A (LEAVE A REPLY)

Reference:

<https://activedirectorypro.com/how-to-check-fsmo-roles/>

NEW QUESTION: 27

You need to meet the technical requirements for Server4.

Which cmdlets should you run on Server1 and Server4? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Reference:

<https://4sysops.com/wiki/enable-powershell-remoting/>

NEW QUESTION: 28

You have a Windows Server container host named Server1 and an Azure subscription.

You deploy an Azure container registry named Registry1 to the subscription.

On Server1, you create a container image named image1.

You need to store image1 in Registry1.

Which command should you run on Server1 ? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 29

You need to configure remote administration to meet the security requirements. What should you use?

- A. just in time (JIT) VM access
- B. Azure AD Privileged Identity Management (PIM)
- C. an Azure Bastion host
- D. the Remote Desktop extension for Azure Cloud Services

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 30

You have an on-premises server named Server1 that runs Windows Server. You have an Azure virtual network that contains an Azure virtual network gateway. You need to connect only Server1 to the Azure virtual network What should you use?

- A. Azure Network Adapter
- B. a Site-to-SiteVPN
- C. an ExpressRoute circuit
- D. Azure Extended Network

Answer: ([SHOW ANSWER](#))

Reference:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/use-azure-network-adapter>

NEW QUESTION: 31

Your network contains an on -premises Active Directory Domain Services (AD DS) domain named contoso.com The domain contains the objects shown in the following table.

You plan to sync contoso.com with an Azure Active Directory (Azure AD) tenant by using Azure AD Connect You need to ensure that all the objects can be used in Conditional Access policies What should you do?

- A. Change the scope of Group2 to Universal
- B. Change the scope o' Group1 and Group2 to Global
- C. Select the Configure Hybrid A2urc AD join option.
- D. Clear the Configure device writeback option.

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 32

You plan to deploy an Azure virtual machine that will run Windows Server.

You need to ensure that an Azure Active Directory (Azure AD) user named user1@contoso.com can connect to the virtual machine by using the Azure Serial Console.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 33

You have five file servers that run Windows Server.

You need to block users from uploading video files that have the .mov extension to shared folders on the file servers. All other types of files must be allowed. The solution must minimize administrative effort.

What should you create?

- A.** a Dynamic Access Control central access policy
- B.** a file screen
- C.** a Dynamic Access Control central access rule
- D.** a data loss prevention (DLP) policy

Answer: B (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/windows-server/storage/fsrm/file-screening-management>

NEW QUESTION: 34

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 35

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.

You need to identify which server is the PDC emulator for the domain.

Solution: from Active Directory Users and Computers, you right-click contoso.com in the console tree, and then select Operations Master

Does this meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)

NEW QUESTION: 36

You have a server named Host1 that has the Hyper-V server role installed. Host1 hosts a virtual machine named VM1.

You have a management server named Server1 that runs Windows Server. You remotely manage Host1 from Server1 by using Hyper-V Manager.

You need to ensure that you can access a USB hard drive connected to Server1 when you connect to VM1 by using Virtual Machine Connection.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. From Disk Management on Host1, select Rescan Disks

B. From Virtual Machine Connection, switch to a basic session.

C. From Disk Management on Host1, attach a virtual hard disk.

D. From the Hyper-V Settings of Host1, select Allow enhanced session mode

E. From Virtual Machine Connection select Show Options and then select the USB hard drive.

Answer: (SHOW ANSWER)

NEW QUESTION: 37

You need to meet the technical requirements for VM3

On which volumes can you enable Data Deduplication?

A. D and E only

B. C, D, E, and F

C. D only

D. C and D only

E. D, E, and F only

Answer: C (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/understand>
Topic 2, Fabrikam inc.

Requirements:

Fabrikam Identifies the following planned changes:

- * Create a single Azure subscription named Sub1 that will contain a single Azure virtual network named Vnet1.
- * Replace the WAN links between the Seattle and New York offices by using Azure Virtual WAN and ExpressRoute. Both on-premises offices will be connected to Vnet1 by using ExpressRoute.
- * Create three Azure file shares named newyorkfiles, seattlefiles, and companyfiles.
- * Create a domain controller named dc3.corp.fabrikam.com in Vnet1.
- * Deploy an Azure Virtual Desktop host pool to Vnet1. The Azure Virtual Desktop session hosts will be hybrid Azure AD joined.
- * License all servers for Microsoft Defender for servers.
- * Use Azure Policy to enforce configuration management policies on the servers in Azure and on-premises.

Networking Requirements

Fabrikam identifies the following security requirements:

- * Apply GP04 to the Azure Virtual Desktop session hosts. Ensure that Azure Virtual Desktop user sessions lock after being idle for 10 minutes. Users must be able to control the lockout time manually from their client computer.
- * Ensure that server administrators request approval before they can establish a Remote Desktop connection to an Azure virtual machine. If the request is approved, the connection must be established within two hours.
- * Prevent user passwords from containing all or part of words that are based on the company name, such as Fab, fabrikam or fsbr! |.
- * Ensure that all instances of Webapp1 use the same service account. The password of the service account must change automatically every 30 days.
- * Prevent domain controllers from directly contacting hosts on the internet.

File Sharing Requirements

You need to configure the synchronization of Azure files to meet the following requirements:

- * Ensure that seattlefiles syncs to FS2.
- * Ensure that newyorkfiles syncs to FS1.
- * Ensure that companyfiles syncs to both FS1 and FS2.

NEW QUESTION: 38

You need to meet the technical requirements for VM3

On which volumes can you enable Data Deduplication?

- A.** C, D, E, and F
- B.** D, E, and F only
- C.** D only
- D.** C and D only

E. D and E only

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 39

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder 1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Folder1 is shared by using the following configurations

Answer:

NEW QUESTION: 40

You need to configure network communication between the Seattle and New York offices. The solution must meet the networking requirements.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-wan/virtual-wan-expressroute-portal>

NEW QUESTION: 41

You have two on-premises servers named Server1 and Server2 that run Windows Server. You have an Azure Storage account named storage1 that contains a file share named share1. Server1 syncs with share1 by using Azure File Sync. You need to configure Server2 to sync with share1.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

- 1 - Add a Storage Sync Service to the Azure subscription.
- 2 - On Server2, install the Azure File Sync agent.
- 3 - Register Server2 with the Storage Sync Service.

NEW QUESTION: 42

Which groups can you add to Group3 and Group5? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Reference:

<https://docs.microsoft.com/en-us/windows/security/identity-protection/access-control/active-directory-security-groups>

NEW QUESTION: 43

You have an Azure subscription that contains the following resources:

- * An Azure Log Analytics workspace
- * An Azure Automation account
- * Azure Arc.

You have an on-premises server named Server1 that is onboarded to Azure Arc

You need to manage Microsoft updates on Server1 by using Azure Arc

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

- A.** Add Microsoft Sentinel to the Log Analytics workspace
- B.** On Server1, install the Azure Monitor agent
- C.** From the Automation account, enable Update Management for Server1.
- D.** From the Virtual machines data source of the Log Analytics workspace, connect Server1.

Answer: B,C (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/manage/hybrid/server/best-practices/arc-update-management>

NEW QUESTION: 44

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com.

In the contoso.com domain, you create two users named Admin1 and Admin2.

You need to ensure that the users can perform the following tasks:

- * Admin1 can create and manage Active Directory sites.
- * Admin2 can deploy domain controller to the east.contoso.com domain.

The solution must use the principle of least privilege.

To which group should you add each user? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

Answer:

Reference:

<https://docs.microsoft.com/en-us/windows-server/remote/remote-access/ras/multisite/configure/step-2-configure-the-multisite-infrastructure>

NEW QUESTION: 45

You need to implement a name resolution solution that meets the networking requirements. Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

- A. Create an Azure private DNS zone named corp.fabnkam.com.
- B. Create a virtual network link in the corp.fabnkam.com Azure private DNS zone.
- C. Create an Azure DNS zone named corp.fabrikam.com.
- D. Configure the DNS Servers settings for Vnet1.
- E. Enable autoregistration in the corp.fabnkam.com Azure private DNS zone.
- F. On DC3, install the DNS Server role.
- G. Configure a conditional forwarder on DC3.

Answer: (SHOW ANSWER)

Virtual machines in an Azure virtual network receive their DNS configuration from the DNS settings configured on the virtual network. You need to configure the Azure virtual network to use DC3 as the DNS server. Then all virtual machines in the virtual network will use DC3 and their DNS server.

NEW QUESTION: 46

Your network contains an on-premises Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains three servers that run Windows Server and have the Hyper-V server role installed. Each server has a Switch Embedded Teaming (SET) team.

You need to verify that Remote Direct Memory Access (RDMA) and all the required Windows Server settings are configured properly on each server.

What should you use?

- A. Server Manager
- B. the validate-DCB cmdlet
- C. the Get-NetAdaptor cmdlet
- D. Failover Cluster Manager

Answer: B (LEAVE A REPLY)

NEW QUESTION: 47

Your network contains two VLANs for client computers and one VLAN for a datacenter. Each VLAN is assigned an IPv4 subnet. Currently, all the client computers use static IP addresses.

You plan to deploy a DHCP server to the VLAN in the datacenter.

You need to use the DHCP server to provide IP configurations to all the client computers.

What is the minimum number of scopes and DHCP relays you should create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

<https://sites.google.com/site/chaseerry/cisco-routing/dhcp-relay-agent---one-dhcp-server-for-many-vlans>

NEW QUESTION: 48

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three Active Directory sites named Site1, Site2, and Site3. Each site contains two domain controllers. The sites are connected by using DEFAULTIPSITELINK.

You open a new branch office that contains only client computers.

You need to ensure that the client computers in the new office are primarily authenticated by the domain controllers in Site1.

Solution: You create an organization unit (OU) that contains the client computers in the branch office. You configure the Try Next Closest Site Group Policy Object (GPO) setting in a GPO that is linked to the new OU.

Does this meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

NEW QUESTION: 49

Which groups can you add to Group3 and Groups? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 50

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Folder1 is shared by using the following configurations:

The share permissions for Share1 are shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 51

You have an Azure subscription named sub1 and 503 on-premises virtual machines that run Windows Server.

You plan to onboard the on-premises virtual machines to Azure Arc by running the Azure Arc deployment script. You need to create an identity that will be used by the script to authenticate access to sub1. The solution must use the principle of least privilege.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 52

You need to meet the technical requirements for VM1.

Which cmdlet should you run first? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 53

You have an Azure Active Directory Domain Services (Azure AD DS) domain named contoso.com.

You need to provide an administrator with the ability to manage Group Policy Objects (GPOs). The solution must use the principle of least privilege.

To which group should you add the administrator?

A. AAD DC Administrators

- B. Domain Admins
- C. Schema Admins
- D. Enterprise Admins
- E. Group Policy Creator Owners

Answer: D (LEAVE A REPLY)

NEW QUESTION: 54

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.

You need to identify which server is the PDC emulator for the domain.

Solution: From a command prompt, you run `netdom.exe query fsmo`.

Does this meet the goal?

- A. No
- B. Yes

Answer: A (LEAVE A REPLY)

NEW QUESTION: 55

You have a Windows Server container host named Server 1 and a container image named Image1.

You need to start a container from image1. The solution must run the container on a Hyper-V virtual machine.

Which parameter should you specify when you run the `docker run` command?

- A. `--expose`
- B. `--privileged`
- C. `--runtime`
- D. `--entrypoint`
- E. `--isolation`

Answer: E (LEAVE A REPLY)

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/manage-containers/hyperv-container>

NEW QUESTION: 56

You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed.

You need to limit which Hyper-V module cmdlets helpdesk users can use when administering Server 1 remotely.

You configure Just Enough Administration (JEA) and successfully build the role capabilities and session configuration files.

How should you complete the PowerShell command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

<https://docs.microsoft.com/en-us/powershell/scripting/learn/remoting/jea/register-jea?view=powershell-7.2>

NEW QUESTION: 57

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Each forest contains a single domain. The domains contain the servers shown in the following table.

You need to configure resources based constrained delegation so that the users in contoso.com can use Windows Admin Center on Server) to connect to Server? How should you complete the command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Reference:

<https://docs.microsoft.com/en-us/windows-server/security/kerberos/kerberos-constrained-delegation-overview>

<https://docs.microsoft.com/en-us/powershell/module/activedirectory/set-adcomputer?view=windowsserver2022-ps>

NEW QUESTION: 58

You have a Windows Server container host named Server 1 and a container image named Image1.

You need to start a container from image1. The solution must run the container on a Hyper-V virtual machine.

Which parameter should you specify when you run the docker run command?

- A. --runtime
- B. --isolation
- C. --entrypoint
- D. --expose
- E. --privileged

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 59

You plan to deploy an Azure virtual machine that will run Windows Server.

You need to ensure that an Azure Active Directory (Azure AD) user named user1@contoso.com can connect to the virtual machine by using the Azure Serial Console.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 60

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains two servers named Server1 and Server2.

Server1 contains a disk named Disk2. Disk2 contains a folder named UserDat

a. UserData is shared to the Domain Users group. Disk2 is configured for deduplication.

Server1 is protected by using Azure Backup.

Server1 fails.

You connect Disk2 to Server2.

You need to ensure that you can access all the files on Disk2 as quickly as possible.

What should you do?

A. Create a storage pool.

B. Restore files from Azure Backup.

C. Install the File Server Resource Manager server role.

D. Install the Data Deduplication server role.

Answer: D (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/overview>

NEW QUESTION: 61

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three Active Directory sites named Site1, Site2, and Site3. Each site contains two domain controllers. The sites are connected by using DEFAULTIPSITELINK.

You open a new branch office that contains only client computers.

You need to ensure that the client computers in the new office are primarily authenticated by the domain controllers in Site1.

Solution: You configure the Try Next Closest Site Group Policy Object (GPO) setting in a GPO that is linked to Site1.

Does this meet the goal?

A. No

B. Yes

NEW QUESTION: 62

What should you implement for the deployment of DC3?

- A. Azure AD Application Proxy
- B. Azure Active Directory Domain Services (Azure AD DS)
- C. an Azure virtual machine
- D. an Azure AD administrative unit

Answer: B (LEAVE A REPLY)

NEW QUESTION: 63

You have an on premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant.

You plan to implement self-service password reset (SSPR) in Azure AD.

You need to ensure that users that reset their passwords by using SSPR can use the new password resources in the AD DS domain.

What should you do?

- A. Deploy the Azure AD Password Protection proxy service to the on premises network.
- B. Run the Microsoft Azure Active Directory Connect wizard and select Password writeback.
- C. Grant the Change password permission for the domain to the Azure AD Connect service account.
- D. Grant the impersonate a client after authentication user right to the Azure AD Connect service account.

Answer: (SHOW ANSWER)

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/tutorial-enable-sspr-writeback>

NEW QUESTION: 64

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. You plan deploy 100 new Azure virtual machines that will run Windows Server. You need to ensure that each new virtual machine is joined to the AD DS domain. What should you use?

- A. a Group Policy Object (GPO)

- B. an Azure Resource Manager (ARM) template
- C. an Azure management group
- D. Azure AD Connect

Answer: D ([LEAVE A REPLY](#))
