NEW QUESTION: 1

You plan to deploy an Azure virtual machine that will run Windows Server. The virtual machine will host an Active Directory Domain Services (AD DS) domain controller and a drive named f: on a new virtual disk.

You need to configure storage for the virtual machine. The solution must meet the following requirements

- * Maximize resiliency for AD DS.
- * Prevent accidental data loss.

How should you configure the storage? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Volume for the AD DS database:

C

D

F

Caching configuration for the volume that hosts the database:

NONE

READ

READ/WRITE

Answer:

Answer Area

Volume for the AD DS database:

C

D

F

Caching configuration for the volume that hosts the database:

NONE

READ

READ/WRITE

Explanation

Volume for the AD DS database: C

Caching configuration for the volume that hosts the database: READ/WRITE

NEW QUESTION: 2

You need to sync files from an on premises server named Server1 to Azure by using Azure File Sync. You have a cloud tiering policy that is configured for 30 percent free space and 70 days. Volume E on Server1 is 500 GB. A year ago, you configured E:\Data on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Name	Size	Last accessed
File1	200 GB	2 days ago
File2	100 GB	10 days ago
File3	200 GB	60 days ago
File4	50 GB	100 days ago

Volume E does NOT contain any other files. Where are File1 and File3 located? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

File1:

Server1 only

The Azure file share only

Server1 and the Azure file share

File3:

Server1 only

The Azure file share only

Server1 and the Azure file share

Answer:

File1:

Microsoft

Server1 only

The Azure file share only

Server1 and the Azure file share

File3:

Server1 only

The Azure file share only

Server1 and the Azure file share

Reference:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-file-sync>

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-cloud-tiering-overview>

NEW QUESTION: 3

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Each forest contains a single domain. The domains contain the servers shown in the following table.

Name	Domain	Description
Server1	contoso.com	Hosts a Windows Admin Center gateway
Server2	fabrikam.com	Hosts resources that will be managed remotely by using Windows Admin Center on Server1

You need to configure resources based constrained delegation so that the users In contoso.com can use Windows Admin Center on Server) to connect to Server? How should you complete the command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Set-ADComputer -Identity

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

-PrincipalsAllowedToDelegateToAccount

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

Answer:

Answer Area

Set-ADComputer -Identity

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

-PrincipalsAllowedToDelegateToAccount

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

Explanation

Text Description automatically generated

Set-ADComputer -Identity

(Get-ADComputer server1.contoso.com)
(Get-ADComputer server2.fabrikam.com)
(Get-ADGroup 'Contoso\Domain Users')
(Get-ADGroup 'Fabrikam\Domain Users')

-PrincipalsAllowedToDelegateToAccount

(Get-ADComputer server1.contoso.com)

NEW QUESTION: 4

You have an onpremises DNS server named Server1 that runs Windows Server. Server 1 hosts a DNS zone named fabrikam.com You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
Vnet1	Virtual network	Connects to the on-premises network by using a Site-to-Site VPN
VM1	Virtual machine	Runs Windows Server and has the DNS Server role installed
contoso.com	Private DNS zone	Linked to Vnet1
contoso.com	Public DNS zone	Contains the DNS records of all the platform as a service (PaaS) resources

Answer Area

On Vnet1:

Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.
Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:

Configure forwarding for the contoso.com zone to VM1.
Configure forwarding for the contoso.com zone to the public DNS zone.
Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

Answer:

Answer Area

On Vnet1:

- Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
- Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.
- Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:

- Configure forwarding for the contoso.com zone to VM1.
- Configure forwarding for the contoso.com zone to the public DNS zone.
- Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

NEW QUESTION: 5

You have two on-premises servers named Server1 and Server2 that run Windows Server.

You have an Azure Storage account named storage1 that contains a file share named share1. Server1 syncs with share1 by using Azure File Sync. You need to configure Server2 to sync with share1.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Register Server2 with the Storage Sync Service.
- Add a Storage Sync Service to the Azure subscription.
- On Server2, install the Azure File Sync agent.
- Add a cloud endpoint to the sync group.
- Add a server endpoint to the sync group.

Answer Area

Answer:

Answer Area

- On Server2, install the Azure File Sync agent.
- Register Server2 with the Storage Sync Service.
- Add a server endpoint to the sync group.

- 1 - On Server2, install the Azure File Sync agent.
- 2 - Register Server2 with the Storage Sync Service.
- 3 - Add a server endpoint to the sync group.

NEW QUESTION: 6

Which groups can you add to Group3 and Groups? To answer, select the appropriate options in the answer area. NOTE Each correct selection is worth one point.

Answer Area

Group3:

Group6 only

Group1 and Group2 only

Group1 and Group4 only

Group1, Group2, Group4, and Group5 only

Group1, Group2, Group4, Group5, and Group6

Group5:

Group1 only

Group4 only

Group6 only

Group2 and Group4 only

Group4 and Group6 only

Answer:

Answer Area

Group3:

Group6 only

Group1 and Group2 only

Group1 and Group4 only

Group1, Group2, Group4, and Group5 only

Group1, Group2, Group4, Group5, and Group6

Group5:

Group1 only

Group4 only

Group6 only

Group2 and Group4 only

Group4 and Group6 only

NEW QUESTION: 7

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. The on-premises network is connected to Azure by using a Site-to-Site VPN. You have the DNS zones shown in the following table.

Name	Location	Description
contoso.com	A domain controller named DC1 on the on-premises network	Provide name resolution on-premises
fabrikam.com	An Azure private DNS zone	Provides name resolution for all Azure Virtual networks

You need to ensure that names from fabrikam.com can be resolved from the on-premises network.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a conditional forwarder for fabrikam.com on DC1.
- B. Create a stub zone for fabrikam.com on DC1.
- C. Create a secondary zone for fabrikam.com on DC1.
- D. Deploy an Azure virtual machine that runs Windows Server. Modify the DNS Servers settings for the virtual network.
- E. Deploy an Azure virtual machine the runs Windows Server. Configure the virtual machine &s a DNS forwarder.

Answer: A,E (LEAVE A REPLY)

<https://docs.microsoft.com/en-us/azure/private-link/private-endpoint-dns#on-premises-workloads- using-a-dns-forwarder>

NEW QUESTION: 8

You need to meet the technical requirements for VM1.
Which cmdlet should you run first? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

NEW QUESTION: 9

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.

You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: On Server2, you create a conditional forwarder for west.contoso.local. On Server3, you create a conditional forwarder for east.contoso.local.

Does this meet the goal?

A. No

B. Yes

Answer: (SHOW ANSWER)

NEW QUESTION: 10

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. Contoso.com contains three child domains named amer.contoso.com, apac.contoso.com, and emea.contoso.com. Fabrikam.com contains a child domain named apac.fabrikam.com. A bidirectional forest trust exists between contoso.com and fabrikam.com.

You need to provide users in the contoso.com forest with access to the resources in the fabrikam.com forest.

The solution must meet the following requirements:

- * Users in contoso.com must only be added directly to groups in the contoso.com forest.
- * Permissions to access the resources in fabrikam.com must only be granted directly to groups in the fabrikam.com forest.
- * The number of groups must be minimized.

Which type of groups should you use to organize the users and to assign permissions? To answer, drag the appropriate group types to the correct requirements. Each group type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

NEW QUESTION: 11

You have an on-premises server named Server1 that runs Windows Server and has internet connectivity.

You have an Azure subscription.

You need to monitor Server1 by using Azure Monitor.

Which resources should you create in the subscription, and what should you install on Server1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

In the subscription, create:

An Azure Files storage account
A Log Analytics workspace
An Azure SQL database and a data collection rule
An Azure Blob Storage account and a data collection rule

On Server1, install:

The Azure Monitor agent
The Analytics gateway
The Device Health Attestation server role

Answer:

In the subscription, create:

An Azure Files storage account

A Log Analytics workspace

An Azure SQL database and a data collection rule

An Azure Blob Storage account and a data collection rule

On Server1, install:

The Azure Monitor agent

The Analytics gateway

The Device Health Attestation server role

Reference:
<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-monitor>

NEW QUESTION: 12

You have on-premises file servers that run Windows Server as shown in the following table.

You have the Azure file shares shown in the following table.

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint.

You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	☐	☐
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	☐	☐
You can add D:\Data from Server2 as a server endpoint in Group1.	☐	☐

Answer:

Statements

Yes No

You can add share2 as a cloud endpoint in Group1.

☐☒

You can add E:\Folder2 from Server1 as a server endpoint in Group1.

☒☐

You can add D:\Data from Server2 as a server endpoint in Group1.

☒☐

Reference:

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-planning>

NEW QUESTION: 13

You have an Azure subscription that contains a virtual network named VNet1. Vnet1 contains three subnets named Subnet1, Subnet2, and Subnet3. You deploy a virtual machine that has the following settings:

- * Name: VM1
- * Subnet: Subnet2
- * Network interface name: NIC1
- * Operating system: Windows Server 2022

You need to ensure that VM1 can route traffic between Subnet1 and Subnet3. The solution must minimize administrative effort.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

From the Azure portal:

Associate a routing table with Subnet2.

Associate a routing table with Subnet2.

Attach two additional interfaces to VM1.

Enable IP forwarding for NIC1.

On VM1:

Install and configure a network controller.

Install and configure a network controller.

Install and configure Routing and Remote Access.

Run the route add command.

Answer:

Answer Area

From the Azure portal:

Associate a routing table with Subnet2.

Associate a routing table with Subnet2.

Attach two additional interfaces to VM1.

Enable IP forwarding for NIC1.

On VM1:

Install and configure a network controller.

Install and configure a network controller.

Install and configure Routing and Remote Access.

Run the route add command.

NEW QUESTION: 14

You have an Azure virtual machine named VM1 that runs Windows Server. You perform the following actions on VM1:

- * Create a folder named Folder1 on volume C
- * Create a folder named Folder2 on volume D.
- * Add a new data disk to VM1 and create a new volume that is assigned drive letter E.
- * Install an app named App1 on volume E.

You plan to resize VM1.

Which objects will present after you resize VM1 ?

- A.** Folder1 and Folder2 only
- B.** Folder1 only
- C.** Folder1, Folder2, App1, and volume E
- D.** Folder1, volume E, and App1 only

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 15

You have a server named Server1 that hosts Windows containers. You plan to deploy an application that will have multiple containers. Each container will be You need to create a Docker network that supports the deployment of the application. Which type of network should you create?

- A.** transparent
- B.** I2bridge
- C.** NAT
- D.** I2tunnel

Answer: B ([LEAVE A REPLY](#))

Reference:

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/container-networking/network-drivers-topologies>

NEW QUESTION: 16

Your network contains a single domain Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a single Active Directory site.

You plan to deploy a read only domain controller (RODC) to a new datacenter on a server named Server1. A user named User1 is a member of the local Administrators group on Server1.

You need to recommend a deployment plan that meets the following requirements:

Ensures that a user named User1 can perform the RODC installation on Server1 Ensures that you can control the AD DS replication schedule to the Server1 Ensures that Server1 is in a new site named RemoteSite1 Uses the principle of least privilege Which three actions should you recommend performing in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.	
Create a site and a subnet.	
Create a site link.	
Pre-create an RODC account.	
Add User1 to the Contoso\Administrators group.	

Answer:

Answer Area
Create a site and a subnet.
Pre-create an RODC account.
Instruct User1 to run the Active Directory Domain Service installation Wizard on Server1.

- 1 - Create a site and a subnet.
- 2 - Pre-create an RODC account.
- 3 - Instruct User1 to run the Active Directory Domain Service installation Wizard on Server1.

NEW QUESTION: 17

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.

You need to identify which server is the PDC emulator for the domain.

Solution: From Active Directory Domains and Trusts, you right-click Active Directory Domains and Trusts in the console tree, and then select Operations Master.

Does this meet the goal?

A. Yes

B. No

Answer: (SHOW ANSWER)

NEW QUESTION: 18

You have 10 on-premises servers that run Windows Server.

You plan to use Azure Network Adapter to connect the servers to the resources in Azure.

Which prerequisites do you require on-premises and in Azure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To configure the on-premises servers, use:

Azure CLI
Routing and Remote Access
Server Manager
Windows Admin Center

To connect the Azure resources and Azure Network Server Manager Adapter, use:

Azure Bastion
Azure Firewall
An Azure virtual network gateway
A private endpoint
A public Azure Load Balancer

Answer:

To configure the on-premises servers, use:

Azure CLI
Routing and Remote Access
Server Manager
Windows Admin Center

To connect the Azure resources and Azure Network Server Manager Adapter, use:

Azure Bastion
Azure Firewall
An Azure virtual network gateway
A private endpoint
A public Azure Load Balancer

NEW QUESTION: 20

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains two servers named Server1 and Server2.

Server1 contains a disk named Disk2. Disk2 contains a folder named UserDat

a. UserData is shared to the Domain Users group. Disk2 is configured for deduplication. Server1 is protected by using Azure Backup. Server1 fails.

You connect Disk2 to Server2.

You need to ensure that you can access all the files on Disk2 as quickly as possible.

What should you do?

- A. Create a storage pool.
- B. Restore files from Azure Backup.
- C. Install the File Server Resource Manager server role.
- D. Install the Data Deduplication server role.

Answer: D (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/overview>

NEW QUESTION: 22

You have an on-premises server named Server1 that runs Windows Server. You have an Azure virtual network that contains an Azure virtual network gateway. You need to connect only Server1 to the Azure virtual network. What should you use?

- A. Azure Extended Network
- B. a Site-to-SiteVPN
- C. Azure Network Adapter
- D. an ExpressRoute circuit

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 23

Your network contains two Active Directory forests and a domain trust as shown in the following exhibit.

The domain trust has the following configurations:

- * Name: adatum.com
- * Type: External
- * Direction: One-way, outgoing
- * Outgoing trust authentication level: Domain-wide authentication

Name	Domain
User1	adatum.com
User2	contoso.com
User3	east.contoso.com

The forests contain the network shares shown in the following table.

Name	In domain
Share1	adatum.com
Share2	contoso.com
Share3	east.contoso.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

Statements	Yes	No
User1 can be assigned permissions for Share3.	☐	☐
User2 can be assigned permissions for Share1.	☐	☐
User3 can be assigned permissions for Share1.	☐	☐

Answer:

Microsoft

Statements	Yes	No
User1 can be assigned permissions for Share3.	☒	☐
User2 can be assigned permissions for Share1.	☐	☒
User3 can be assigned permissions for Share1.	☐	☒

NEW QUESTION: 24

You need to meet the technical requirements for Server4.
Which cmdlets should you run on Server1 and Server4? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Server1:

☐

☐

☐

☐

Server4:

☐

☐

☐

☐

Answer:

Server1:

Microsoft

NEW QUESTION: 25

You have an Azure Active Directory Domain Services (Azure AD DS) domain named contoso.com.

You need to provide an administrator with the ability to manage Group Policy Objects (GPOs). The solution must use the principle of least privilege.

To which group should you add the administrator?

- A. AAD DC Administrators
- B. Domain Admins
- C. Schema Admins
- D. Enterprise Admins
- E. Group Policy Creator Owners

Answer: B (LEAVE A REPLY)

Only the Domain Admins group and the Enterprise Admins group can fully manage GPOs. Members of the Group Policy Creator Owners group can create new GPOs but they can't link the GPOs to sites, the domain or OUs and they cannot manage existing GPOs.

NEW QUESTION: 26

You have two on-premises servers named Server1 and Servet2 that run Windows Server.

You have an Azure Storage account named storage1 that contains a file share named share'. Server1 syncs with share1 by using Azure File Sync You need to configure Server2 to sync with share1.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Name	Configuration	Office
AADC1	Azure AD Connect	New York
APP1	Application Server	New York
APP2	Application Server	Seattle
DC1	Domain Controller	New York
DC2	Domain Controller	Seattle
DHCP1	DHCP server	New York
DHCP2	DHCP server	Seattle
FS1	File server	New York
FS2	File server	Seattle
VM1	None	New York
VM2	None	Seattle
WEB1	Web server	New York
WEB2	Web server	Seattle

DC1 hosts all the operation master roles.

WEB1 and WEB2 run an Internet Information Services (IIS) web app named Webapp1.

On-premises Network

The New York and Seattle offices are connected by using redundant WAN links.

The client computers in each office get IP addresses from their local DHCP server.

DHCP1 contains a scope named Scope1 that has addresses for the New York office, DHCP2 contains a scope named Scope2 that has addresses for the Seattle office.

Identity Infrastructure

The network contains a single on-premises Active Directory Domain Services (AD DS) domain named corp.fabrikam.com. Currently, all the service accounts use individual domain user accounts.

All domain controllers have the DNS Server role installed and host a copy of the Active Directory integrated DNS zone of corp.fabrikam.com.

The corp.fabrikam.com AD DS domain syncs with an Azure Active Directory (Azure AD) tenant.

Group Policy Objects (GPOs)

The corp.fabrikam.com domain contains the organizational units (OUs) and custom Group Policy Objects (GPOs) shown in the following table.

OU name	Linked GPO	Description
AllUsers	GPO1	Contains all the user accounts in the domain
AllComputers	GPO2	Contains all the computer accounts for the client computers in the domain
AllServers	GPO3	Contains all the computer accounts for Windows servers
VirtualDesktops	GPO4	A new OU that will contain the computers account for AzureVirtual Desktop session hosts

Requirements

Planned Changes

Fabrikam identifies the following planned changes:

Create a single Azure subscription named Sub1 that will contain a single Azure virtual network named Vnet1.

Replace the WAN links between the Seattle and New York offices by using Azure Virtual WAN and ExpressRoute. Both on premises offices will be connected to Vnet1 by using ExpressRoute.

Create three Azure file shares named newyorkhiles, seattlefiles, and companyfiles.

Create a domain controller named dc3.corp.fabrikam.com in Vnet1.

Deploy an Azure Virtual Desktop host pool to Vnet1. The Azure Virtual Desktop session hosts will be hybrid Azure AD-joined.

License all servers for Microsoft Defender for servers.

Use Azure Policy to enforce configuration management policies on the servers in Azure and on- premises.

Networking Requirements

Fabrikam identifies the following networking requirements:

Implement Virtual WAN and ensure that all the network traffic between the sites uses Virtual WAN. All communications must occur over ExpressRoute.

If a DHCP server fails, ensure that the client computers can continue to receive their dynamic IP address and renew their existing lease.

Ensure that the resources in Vnet1 can resolve the names of the on-premises servers in the corp.fabrikam.com domain.

Security Requirements

Fabrikam identifies the following security requirements:

Apply GPO4 to the Azure Virtual Desktop session hosts. Ensure that Azure Virtual Desktop user sessions lock after being idle for 10 minutes. Users must be able to control the lockout time manually from their client computer.

Ensure that server administrators request approval before they can establish a Remote Desktop connection to an Azure virtual machine. If the request is approved, the connection must be established within two hours.

Prevent user passwords from containing all or part of words that are based on the company name, such as Fab, f@br1kAm or fabr!|.

Ensure that all instances of Webapp1 use the same service account. The password of the service account must change automatically every 30 days.

Prevent domain controllers from directly contacting hosts on the internet.

File Sharing Requirements

You need to configure the synchronization of Azure files to meet the following requirements:

Ensure that seattlefiles syncs to FS2.

Ensure that newyorkfiles syncs to FS1.

Ensure that companyfiles syncs to both FS1 and FS2.

Question

You need to implement a name resolution solution that meets the networking requirements.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

- A.** Create an Azure private DNS zone named corp.fabrikam.com.
- B.** Create a virtual network link in the coip.fabrikam.com Azure private DNS zone.
- C.** Create an Azure DNS zone named corp.fabrikam.com.
- D.** Configure the DNS Servers settings for Vnet1.
- E.** Enable autoregistration in the corp.fabrikam.com Azure private DNS zone.
- F.** On DC3, install the DNS Server role.
- G.** Configure a conditional forwarder on DC3.

Answer: D,F (LEAVE A REPLY)

Virtual machines in an Azure virtual network receive their DNS configuration from the DNS settings configured on the virtual network. You need to configure the Azure virtual network to use DC3 as the DNS server. Then all virtual machines in the virtual network will use DC3 and their DNS server.

NEW QUESTION: 29

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant

You have an on-premises web app named WebApp1 that only supports Kerberos authentication.

You need to ensure that users can access WebApp1 by using their Azure AD account. The solution must minimize administrative effort.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/app-proxy/application-proxy-add-on-premises-application>

NEW QUESTION: 30

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains a server named Server1 that has the DFS Namespaces role service installed. Server1 hosts a domain-based Distributed File System (DFS) Namespace named Files.

The domain contains a file server named Server2. Server2 contains a shared folder named Share1. Share1 contains a subfolder named Folder1.

In the Files namespace, you create a folder named Folder1 that has a target of \\Server2.contoso.com\Share1\Folder1.

You need to configure a logon script that will map drive letter M to Folder1. The solution must use the path of the DFS Namespace. How should you complete the command to map the drive letter? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Text Description automatically generated with low confidence

NEW QUESTION: 31

You need to sync files from an on-premises server named Server1 to Azure by using Azure File Sync You have a cloud tiering policy that is configured for 30 percent free space and 70 days.

Volume f on Server1 is 500 GB.

A year ago, you configured E:\\Oata on Server1 to sync by using Azure File Sync. The files that are visible in E:\\Data are shown in the following table.

Name	Size	Last accessed
File1	200 GB	2 days ago
File2	100 GB	10 days ago
File3	200 GB	60 days ago
File4	50 GB	100 days ago

Volume E does NOT contain any other files.

Where are File1 and flle3 located? To answer, select the appropriate options In the answer area.

Answer Area

File1:

Server1 only

The Azure file share only

Server1 and the Azure file share

File3:

Server1 only

The Azure file share only

Server 1 and the Azure file share

Answer:

Answer Area

File1:

☒ Server1 only

☒ The Azure file share only

☐ Server1 and the Azure file share

File3:

☒ Server1 only

☒ The Azure file share only

☒ Server 1 and the Azure file share

Explanation

NEW QUESTION: 32

You need to configure remote administration to meet the security requirements. What should you use?

- A. just in time (JIT) VM access
- B. Azure AD Privileged Identity Management (PIM)
- C. the Remote Desktop extension for Azure Cloud Services
- D. an Azure Bastion host

Answer: A (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/just-in-time-access-usage?tabs=jit-config-asc%2Cjit-request-asc>

NEW QUESTION: 33

You have an on premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. You plan to implement self-service password reset (SSPR) in Azure AD.

You need to ensure that users that reset their passwords by using SSPR can use the new password resources in the AD DS domain.

What should you do?

- A. Deploy the Azure AD Password Protection proxy service to the on premises network.
- B. Run the Microsoft Azure Active Directory Connect wizard and select Password writeback.
- C. Grant the Change password permission for the domain to the Azure AD Connect service account.
- D. Grant the impersonate a client after authentication user right to the Azure AD Connect service account.

Answer: (SHOW ANSWER)

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/tutorial-enable-sspr- writeback>

NEW QUESTION: 34

You have an Azure Active Directory Domain Services (Azure AD DS) domain.

You create a new user named Admin1.

You need Admin1 to deploy custom Group Policy settings to all the computers in the domain. The solution must use the principle of least privilege.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point

Add Admin1 to the following group:

AAD DC Administrators
Domain Admins
Group Policy Creator Owners

instruct Admin1 to apply the custom Group Policy settings by:

Creating a new Group Policy Object (GPO) and linking the GPO to the domain
Modifying AADDC Computers GPO
Modifying the default domain GPO

Answer:

Add Admin1 to the following group:

AAD DC Administrators
Domain Admins
Group Policy Creator Owners

instruct Admin1 to apply the custom Group Policy settings by:

Creating a new Group Policy Object (GPO) and linking the GPO to the domain
Modifying AADDC Computers GPO
Modifying the default domain GPO

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory-domain-services/manage-group-policy>

NEW QUESTION: 35

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

Name	IP address
VPN1	172.16.0.254
VPN2	131.10.15.254
VPN3	10.10.0.254

You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

Name : NPSCient1
Address : 172.16.0.254
AuthAttributeRequired : False
SharedSecret : Pa55w.rd
VendorName : RADIUS Standard
Enabled : False

Name : NPSCient2
Address : 131.10.15.254
AuthAttributeRequired : False
SharedSecret : Pa55w.rd
VendorName : RADIUS Standard
Enabled : True

Name : NPSCient3
Address : 172.16.1.254
AuthAttributeRequired : False
SharedSecret : Pa55w.rd
VendorName : RADIUS Standard

VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes If the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area	Statements	Yes	No
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	☐	☐
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	☐	☐
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	☐	☐

Answer:

Answer Area	Statements	Yes	No
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	☐	☒
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	☒	☐
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	☒	☐

NEW QUESTION: 36

Your company has a main office and a branch office. The two offices are connected by using a WAN link. Each office contains a firewall that filters WAN traffic.

The network in the branch office contains 10 servers that run Windows Server. All servers are administered from the main office only.

You plan to manage the servers in the branch office by using a Windows Admin Center gateway.

On a server in the branch office, you install the Windows Admin Center gateway by using the defaults settings.

You need to configure the firewall in the branch office to allow the required inbound connection to the Windows Admin Center gateway.

Which inbound TCP port should you allow?

- A. 3389
- B. 6516
- C. 5985
- D. 443

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 37

You need to configure network communication between the Seattle and New York offices. The solution must meet the networking requirements.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

On a Virtual WAN hub:

An ExpressRoute gateway

A virtual network gateway

An ExpressRoute circuit connection

In the offices:

An ExpressRoute circuit connection

A Site to-Site VPN

An Azure application gateway

An on premises data gateway

Answer:

On a Virtual WAN hub:

An ExpressRoute gateway

A virtual network gateway

An ExpressRoute circuit connection

In the offices:

An ExpressRoute circuit connection

A Site to-Site VPN

An Azure application gateway

An on premises data gateway

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-wan/virtual-wan-expressroute-portal>

NEW QUESTION: 38

You have an onpremises DNS server named Server1 that runs Windows Server. Server 1 hosts a DNS zone named fabrikam.com You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
Vnet1	Virtual network	Connects to the on-premises network by using a Site-to-Site VPN
VM1	Virtual machine	Runs Windows Server and has the DNS Server role installed
contoso.com	Private DNS zone	Linked to Vnet1
contoso.com	Public DNS zone	Contains the DNS records of all the platform as a service (PaaS) resources

Answer Area

Microsoft

On Vnet1:

Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.
Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:

Configure forwarding for the contoso.com zone to VM1.
Configure forwarding for the contoso.com zone to the public DNS zone.
Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

Answer:

Answer Area

Microsoft

On Vnet1:

Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.
Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:

Configure forwarding for the contoso.com zone to VM1.
Configure forwarding for the contoso.com zone to the public DNS zone.
Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

NEW QUESTION: 39

You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed. You need 10 limit which Hyper-V module cmdlets helpdesk users can use when administering Server 1 remotely. You configure Just Enough Administration (JEA) and successfully build the role capabilities and session configuration files. How should you complete the PowerShell command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

Enter-PSSession

NEW QUESTION: 40

You have a file server named Server1 that runs Windows Server and contains the volumes shown in the following table.

Name	File system
C	NTFS
D	NTFS
E	REFS

On which volumes can you use BitLocker Drive Encryption (BitLocker) and disk quotas? To answer select the appropriate options in the answer area

a. NOTE Each correct selection is worth one point.

Microsoft

BitLocker:

C only

D only

C and D only

D and E only

C, D, and E

Disk quotas:

C only

D only

C and D only

D and E only

C, D, and E

Answer:

Microsoft

BitLocker:

C only

D only

C and D only

D and E only

C, D, and E

Disk quotas:

C only

D only

C and D only

D and E only

C, D, and E

<https://docs.microsoft.com/en-us/windows-server/storage/refs/refs-overview>

NEW QUESTION: 41

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The root domain contains the domain controllers shown in the following table.

Name	FSMO role
DC1	Domain naming master
DC2	RID master
DC3	PDC emulator
DC4	Schema master
DC5	Infrastructure master

A failure of which domain controller will prevent you from creating application partitions?

- A. DC1
- B. DC2
- C. DC3
- D. DC4
- E. DC5

Answer: A ([LEAVE A REPLY](#))

Reference:

<https://docs.microsoft.com/en-us/troubleshoot/windows-server/identity/fsmo-roles>

NEW QUESTION: 42

You need to meet the security requirements for passwords.

Where should you configure the components for Azure AD Password Protection? To answer, drag the appropriate components to the correct locations. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE Each correct selection is worth one point.

Locations

DC1 only

All the domain controllers

VM1 and VM2

The Azure AD tenant

Answer Area

The Azure AD Password Protection DC agent:

Location

The Azure AD Password Protection proxy service:

Location

A custom banned password list:

Location

Answer:

Locations

DC1 only

All the domain controllers

VM1 and VM2

The Azure AD tenant

Answer Area

The Azure AD Password Protection DC agent:

All the domain controllers

The Azure AD Password Protection proxy service:

The Azure AD tenant

A custom banned password list:

VM1 and VM2

NEW QUESTION: 43

Hotspot Question

Your network contains two VLANs for client computers and one VLAN for a datacenter. Each VLAN is assigned an IPv4 subnet. Currently, all the client computers use static IP addresses.

You plan to deploy a DHCP server to the VLAN in the datacenter.
You need to use the DHCP server to provide IP configurations to all the client computers.
What is the minimum number of scopes and DHCP relays you should create? To answer, select the appropriate option the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

DHCP scopes:

1

2

3

4

DHCP relays:

1

2

3

4

Microsoft

Answer:

Answer Area

DHCP scopes:

1
2
3
4

DHCP relays:

1
2
3
4

Explanation:

Box 1: 2

You need a scope for each client subnet, but you don't need a scope for the datacenter subnet.

Box 2: 2

The two client VLANs need a DHCP Relay Agent to forward DHCP requests to the DHCP server.

The datacenter VLAN that contains the DHCP server does not require a DHCP Relay Agent.

NEW QUESTION: 44

You are planning the implementation Azure Arc to support the planned changes. You need to configure the environment to support configuration management policies. What should you do?

A. Create a hybrid runbook worker in Azure Automation.

- B. Deploy the Azure Connected Machine agent to all the servers.
- C. Hybrid Azure AD join all the servers.
- D. Deploy the Azure Monitor agent to all the servers.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 45

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Advanced Security Settings for Folder1

Name: D:\Folder1

Owner: Administrators (SERVER1\Administrators) Change

Permissions

Share

Auditing

Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

Type	Principal	Access	Inherited from	Applies to
Allow	Administrators (SERVER1\Administrators)	Full control	None	This folder, subfolders and files
Allow	Group1 (ADATUM\Group1)	Read	None	This folder, subfolders and files
Allow	Group2 (ADATUM\Group2)	Write	None	This folder, subfolders and files

Add

Remove

View

Enable inheritance

☐ Replace all child object permission entries with inheritable permission entries from this object

OK

Cancel

Apply

Folder1 is shared by using the following configurations:

Path : D:\Folder1
Name : Share1
ShareType : FileSystemDirectory
FolderEnumerationMode : Unrestricted

The share permissions for Share1 are shown in the following table.

Group	Permission
Group1	Allow – Change
Group3	Allow – Full Control

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can read the files in Share1.	☐	☐
User3 can delete files in Share1.	☐	☐
If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.	☐	☐

Answer:

Statements	Yes	No
User1 can read the files in Share1.	☒	☐
User3 can delete files in Share1.	☐	☒
If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.	☒	☐

Explanation

To access files in a shared folder, you need to be granted permissions on the folder (NTFS permissions) AND permissions on the share. The most restrictive permission of the folder permissions and share permissions apply.

Box 1: Yes

Group1 has Read access to Folder1 and Change access to Share1. Therefore, User1 can read the files in Share1.

Box 2: No

Group3 has Full Control access to Share1. However, Group3 has no permissions configured Folder1.

Therefore, User3 cannot access the files in Share1.

Box 3: Yes

Group2 has write permission to Folder1. However, Group2 has no permission on Share1. Therefore, users in Group2 cannot access files in the shared folder.

Access Based Enumeration when enabled hides files and folders that users do not have permission to access.

However, Access Based Enumeration is not enabled on Share1. This is indicated by the FolderEnumerationMode - Unrestricted setting.

Therefore, the share will be visible to User2 even though User2 cannot access the shared folder.

NEW QUESTION: 46

You have an Azure Active Directory Domain Services (Azure AD DS) domain named contoso.com.

You need to provide an administrator with the ability to manage Group Policy Objects (GPOs). The solution must use the principle of least privilege.

To which group should you add the administrator?

- A.** AAD DC Administrators
- B.** Domain Admins
- C.** Schema Admins
- D.** Enterprise Admins
- E.** Group Policy Creator Owners

Answer: B ([LEAVE A REPLY](#))

Explanation

Only the Domain Admins group and the Enterprise Admins group can fully manage GPOs. Members of the Group Policy Creator Owners group can create new GPOs but they can't link the GPOs to sites, the domain or OUs and they cannot manage existing GPOs.

Valid AZ-800 Dumps shared by BraindumpsPass.com for Helping Passing AZ-800 Exam! NEW QUESTION: 47

You need to sync files from an on premises server named Server1 to Azure by using Azure File Sync.

You have a cloud tiering policy that is configured for 30 percent free space and 70 days.

Volume E on Server1 is 500 GB.

A year ago, you configured E:\Data on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Name	Size	Last accessed
File1	200 GB	2 days ago
File2	100 GB	10 days ago
File3	200 GB	60 days ago
File4	50 GB	100 days ago

Volume E does NOT contain any other files.
Where are File1 and File3 located? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

File1:

Server1 only

The Azure file share only

Server1 and the Azure file share

File3:

Server1 only

The Azure file share only

Server1 and the Azure file share

Answer:

File1:

Server1 only

The Azure file share only

Server1 and the Azure file share

File3:

Server1 only

The Azure file share only

Server1 and the Azure file share

Reference:
<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-file-sync>
<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-cloud-tiering-overview>

NEW QUESTION: 48

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.conloso.local and west.contoso.local. All the DNS servers use root hints.

You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: On Server2 and Server3, you configure a conditional forwarder for contoso.local.

Does this meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

[https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2008-r2-and-2008/cc794735\(v=ws.10\)](https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2008-r2-and-2008/cc794735(v=ws.10))

NEW QUESTION: 49

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com The domain contains a server named Server1 and the users shown In the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder 1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Folder1 is shared by using the following configurations

Group	Permission
Group1	Allow - Change
Group3	Allow - Full Control

Path : D:\Folder1
Name : Share1
ShareType : FileSystemDirectory
FolderEnumerationMode : Unrestricted

Statements	Yes	No
User1 can read the files in Share1.	☐	☐
User3 can delete files in Share1.	☐	☐
If User2 connects to \\Server1.adatum.com from File Explorer,	☐	☐

Answer:

Statements	Yes	No
User1 can read the files in Share1.	☒	☐
User3 can delete files in Share1.	☒	☐
If User2 connects to \\Server1.adatum.com from File Explorer,	☐	☒

NEW QUESTION: 50

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.

The network contains the servers shown in the following table.

Name	Role	Domain/workgroup	Operating system
DC1	Active Directory Domain Services, DNS Server	contoso.com	Windows Server
Server1	DHCP Server	contoso.com	Windows Server
Server2	None	contoso.com	Windows Server Core
Server3	None	Workgroup1	Windows Server Core

You plan to implement IP Address Management (IPAM).

You need to use the Group Policy based provisioning method for managed servers. The solution must support server discovery.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Server on which to deploy the IPAM server role:

DC1
Server1
Server2
Server3

Servers that must be provisioned for IPAM:

DC1 and Server1
DC1 and Server1
DC1 and Server3
Server1 and Server2
Server2 and Server3

Answer:

Answer Area

Server on which to deploy the IPAM server role:

DC1
Server1
Server2
Server3

Servers that must be provisioned for IPAM:

DC1 and Server1
DC1 and Server1
DC1 and Server3
Server1 and Server2
Server2 and Server3

NEW QUESTION: 51

Your on-premises network contains an Active Directory domain named contoso.com. You have an Azure AD tenant. You plan to sync contoso.com with the Azure AD tenant by using Azure AD Connect cloud sync. You need to create an account that will be used by Azure AD Connect cloud sync. Which type of account should you create?

- A. group managed service account (gMSA)
- B. system-assigned managed identity
- C. user
- D. InetOrgPerson

Answer: C (LEAVE A REPLY)

NEW QUESTION: 52

You have a server named Server1 that has Windows Admin Center installed. The certificate used by Windows Admin Center was obtained from a certification authority (CA). The certificate expires.

You need to replace the certificate.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Copy the certificate thumbprint.

From Internet Information Services (IIS) Manager, bind a certificate.

Rerun **Windows Admin Center Setup** and select **Change**.

Rerun **Windows Admin Center Setup** and select **Repair**.

Rerun **Windows Admin Center Setup** and select **Remove**.

Answer Area

➤

⬅

Answer:

Answer Area

From Internet Information Service (IIS) Manage, bind a certificate.

Copy the certificate thumbprint.

Rerun Windows Admin Center Setup and select change.

- 1 - From Internet Information Service (IIS) Manage, bind a certificate.
- 2 - Copy the certificate thumbprint.
- 3 - Rerun Windows Admin Center Setup and select change.

NEW QUESTION: 54

You have an Azure subscription that contains the following resources:

- An Azure Log Analytics workspace
- An Azure Automation account
- Azure Arc

You have an on-premises server named Server1 that is onboarded to Azure Arc.

You need to manage Microsoft updates on Server1 by using Azure Arc.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

- A.** Add Microsoft Sentinel to the Log Analytics workspace
- B.** On Server1, install the Azure Monitor agent

- C. From the Automation account, enable Update Management for Server1.
- D. From the Virtual machines data source of the Log Analytics workspace, connect Server1.

Answer: B,C (LEAVE A REPLY)

<https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/manage/hybrid/server/best-practices/arc-update-management>

NEW QUESTION: 55

You create a new Azure subscription.
You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines. The virtual machines will be joined to Azure AD DS.
You need to deploy Active Directory Domain Services (AD DS) to ensure that the virtual machines can be deployed and joined to Azure AD DS.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Modify the settings of the Azure virtual network.

Install the Active Directory Domain Services role.

Install Azure AD Connect.

Create an Azure virtual network.

Create an Azure AD DS instance.

Run the Active Directory Domain Service installation Wizard.

Answer Area

➤

NEW QUESTION: 56

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

Name	IP address
VPN1	172.16.0.254
VPN2	131.10.15.254
VPN3	10.10.0.254

You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

name : NPSCient1
address : 172.16.0.254
AuthAttributeRequired : False
sharedSecret : Pa55w.rd
VendorName : RADIUS Standard
Enabled : False

name : NPSCient2
address : 131.10.15.254
AuthAttributeRequired : False
sharedSecret : Pa55w.rd
VendorName : RADIUS Standard
Enabled : True

name : NPSCient3
address : 172.16.1.254
AuthAttributeRequired : False
sharedSecret : Pa55w.rd
VendorName : RADIUS Standard
Enabled : False

VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes If the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area	Statements	Yes	No
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	☐	☐
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	☐	☐
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	☐	☐

Answer:

Answer Area	Statements	Yes	No
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	☐	☒
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	☒	☐
	The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	☐	☒

NEW QUESTION: 57

You have 10 on-premises servers that run Windows Server.
You plan to use Azure Network Adapter to connect the servers to the resources in Azure.
Which prerequisites do you require on-premises and in Azure? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

To configure the on-premises servers, use:

Azure CLI
Routing and Remote Access
Server Manager
Windows Admin Center

To connect the Azure resources and Azure Network Server Manager Adapter, use:

Azure Bastion
Azure Firewall
An Azure virtual network gateway
A private endpoint
A public Azure Load Balancer

Answer:

To configure the on-premises servers, use:

Azure CLI
Routing and Remote Access
Server Manager
Windows Admin Center

To connect the Azure resources and Azure Network Server Manager Adapter, use:

Azure Bastion
Azure Firewall
An Azure virtual network gateway
A private endpoint
A public Azure Load Balancer

Microsoft

Explanation
Text, table Description automatically generated with medium confidence

To configure the on-premises servers, use:

NEW QUESTION: 58

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Advanced Security Settings for Folder1

Name: D:\Folder1

Owner: Administrators (SERVER1\Administrators) [Change](#)

Permissions | Share | Auditing | Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

Type	Principal	Access	Inherited from	Applies to
Allow	Administrators (SERVER1\Administrators)	Full control	None	This folder, subfolders and files
Allow	Group1 (ADATUM\Group1)	Read	None	This folder, subfolders and files
Allow	Group2 (ADATUM\Group2)	Write	None	This folder, subfolders and files

[Add](#) [Remove](#) [View](#)

[Enable inheritance](#)

☐ Replace all child object permission entries with inheritable permission entries from this object

[OK](#) [Cancel](#) [Apply](#)

Folder1 is shared by using the following configurations:

The share permissions for Share1 are shown in the following table.

Group	Permission
Group1	Allow – Change
Group3	Allow – Full Control

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can read the files in Share1.	☐	☐
User3 can delete files in Share1.	☐	☐
If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.	☐	☐

Answer:

NEW QUESTION: 60

Your company has offices in Boston and Montreal. The offices are connected by using a 10-Mbps WAN link that is often saturated The office in Boston contains the following:

* An Active Directory Domain Services (AD DS) domain controller named DC1.

* A server named Server1 that runs Windows Server and has the File Server role installed The office in Montreal contains 20 client computers that run Windows 10 Montreal does NOT have any servers.

The company plans to deploy a new line of business (LOB) application to all the client computers. The installation source files for the application are in \\Server\Apps.

Answer Area

On Server1:

Enable BranchCache in hosted cache mode.
Enable BranchCache in Distributed Cache mode.
Install the BranchCache for network files role service.

On the client computers:

Enable BranchCache in hosted cache mode.
Enable BranchCache in Distributed Cache mode.
Install the BranchCache for network files role service.

Answer:

On Server1:

Enable BranchCache in hosted cache mode.
Enable BranchCache in Distributed Cache mode.
Install the BranchCache for network files role service.

On the client computers:

Enable BranchCache in hosted cache mode.
Enable BranchCache in Distributed Cache mode.
Install the BranchCache for network files role service.

NEW QUESTION: 61

Your network contains an Active Directory domain, a web app named App1, and a perimeter network. The perimeter network contains a server named Server1 that runs Windows Server.

You plan to provide external access to App1.

You need to implement the Web Application Proxy role service on Server1.

Which role should you add to Server1, and which role should you add to the network? To answer, drag the appropriate roles to the correct targets. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Roles

Active Directory Certificate Services
Active Directory Federation Services
Network Policy and Access Services
Remote Access

Answer Area

Role on Server1:

Role on the network:

NEW QUESTION: 62

You have an on-premises server named Server1 that runs Windows Server and has internet connectivity.

You have an Azure subscription.

You need to monitor Server1 by using Azure Monitor.

Which resources should you create in the subscription, and what should you install on Server1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

In the subscription, create:

- | |
|---|
| ☐ An Azure Files storage account |
| ☐ A Log Analytics workspace |
| ☐ An Azure SQL database and a data collection rule |
| ☐ An Azure Blob Storage account and a data collection rule |

On Server1, install:

- | |
|--|
| ☐ The Azure Monitor agent |
| ☐ The Analytics gateway |
| ☐ The Device Health Attestation server role |

Answer:

In the subscription, create:

An Azure Files storage account
A Log Analytics workspace
An Azure SQL database and a data collection rule
An Azure Blob Storage account and a data collection rule

On Server1, install:

The Azure Monitor agent
The Analytics gateway
The Device Health Attestation server role

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-monitor>

NEW QUESTION: 63

You have an Azure subscription that contains a virtual network named VNet1. Vnet1 contains three subnets named Subnet1, Subnet2, and Subnet3. You deploy a virtual machine that has the following settings:

- * Name: VM1
- * Subnet: Subnet2
- * Network interface name: NIC1
- * Operating system: Windows Server 2022

You need to ensure that VM1 can route traffic between Subnet1 and Subnet3. The solution must minimize administrative effort.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

From the Azure portal:

Associate a routing table with Subnet2.

Associate a routing table with Subnet2.

Attach two additional interfaces to VM1.

Enable IP forwarding for NIC1.

On VM1:

Install and configure a network controller.

Install and configure a network controller.

Install and configure Routing and Remote Access.

Run the route add command.

Answer:

Answer Area

exam-tests.com

From the Azure portal:

- Associate a routing table with Subnet2.
- Associate a routing table with Subnet2.
- Attach two additional interfaces to VM1.
- Enable IP forwarding for NIC1.

On VM1:

- Install and configure a network controller.
- Install and configure a network controller.
- Install and configure Routing and Remote Access.
- Run the route add command.

Explanation

NEW QUESTION: 64

Drag and Drop Question

You have two on-premises servers named Server1 and Server2 that run Windows Server.

You have an Azure Storage account named storage1 that contains a file share named share1.

Server1 syncs with share1 by using Azure File Sync.

You need to configure Server2 to sync with share1.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Add a server endpoint to the sync group.

Register Server2 with the Storage Sync Service.

Add a Storage Sync Service to the Azure Subscription.

On Server2, install the Azure File Sync agent.

Add a cloud endpoint to the sync group.

NEW QUESTION: 65

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains a server named Server1 that has the DFS Namespaces role service installed. Server1 hosts a domain-based Distributed File System (DFS) Namespace named Files.

The domain contains a file server named Server2. Server2 contains a shared folder named Share1. Share1 contains a subfolder named Folder 1.

In the Files namespace, you create a folder named Folder1 that has a target of \\Server2.contoso.com\Share1\Folder1.

You need to configure a logon script that will map drive letter M to Folder1. The solution must use the path of the DFS Namespace.

How should you complete the command to map the drive letter? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 66

One of your friends is confused about which type of disks he should use for production and performance-sensitive workloads. He approaches you for help. What will you suggest to him?

- A. Ultra Disk
- B. Standard HDD
- C. Premium SSD
- D. Standard SSD

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 67

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a file server named Server1 and three users named User1, User2, and User3.

Server1 contains a shared folder named Share1 that has the following configurations:

ShareState	:	Online
AvailabilityType	:	NonClustered
FolderEnumerationMode	:	AccessBased
CachingMode	:	Manual
LeasingMode	:	Full
SmbInstance	:	Default
CompressData	:	False
ContinuouslyAvailable	:	False
EncryptData	:	False
Name	:	Share1
Path	:	E:\Share1
ShadowCopy	:	False

The share permissions for Share1 are configured as shown in the Share Permissions exhibit.

Share1 contains a file named File1.txt. The advanced security settings for File1.txt are configured as shown in the File Permissions exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
When User1 connects to \\Server1.adatum.com\Share1\, the user can take ownership of File1.txt.	☐	☐
When User2 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	☐	☐
When User3 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	☐	☐

Answer:

Statements	Yes	No
When User1 connects to \\Server1.adatum.com\Share1\, the user can take ownership of File1.txt.	☐	☒
When User2 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	☒	☐
When User3 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	☒	☐

Explanation

When User3 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	☒	☐

Topic 1, Fabrikam inc.

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more Information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements, if the case study has an All Information tab. note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Fabrikam, Inc. Is a manufacturing company that has a main office In New York and a branch office in Seattle.

On-premises Servers

The on-premises network contains servers that run Windows Server as shown in the following table.

Name	Configuration	Office
AADC1	Azure AD Connect	New York
APP1	Application server	New York
APP2	Application server	Seattle
DC1	Domain controller	New York
DC2	Domain controller	Seattle
DHCP1	DHCP server	New York
DHCP2	DHCP server	Seattle
FS1	File server	New York
FS2	File server	Seattle
VM1	None	New York
VM2	None	Seattle
WEB1	Web server	New York
WEB2	Web server	Seattle

DC1 hosts all the operation master roles.

WEB1 and WEB2 run an Internet Information Services (IIS) web app named Webapp1.

On-premises Network

The New York and Seattle offices are connected by using redundant WAN links.

The client computers in each office get IP addresses from their local DHCP server.

DHCP1 contains a scope named Scope1 that has addresses for the New York office. DHCP2 contains a scope named Scope2 that has addresses for the Seattle office.

Group Policy Object (GPOs)

The cwp.fabrikam.com domain contains the organizational units (OUs) and custom Group Policy Objects (GPOs) shown in the following table.

OU name	Linked GPO	Description
AllUsers	GPO1	Contains all the user accounts in the domain
AllComputers	GPO2	Contains all the computer accounts for the client computers in the domain
AllServers	GPO3	Contains all the computer accounts for Windows servers
VirtualDesktops	GPO4	A new OU that will contain the computers account for Azure Virtual Desktop session hosts

Requirements:

Fabrikam Identifies the following planned changes:

- * Create a single Azure subscription named Sub1 that will contain a single Azure virtual network named Vnet1.
- * Replace the WAN links between the Seattle and New York offices by using Azure Virtual WAN and ExpressRoute. Both on-premises offices will be connected to Vnet1 by using ExpressRoute.
- * Create three Azure file shares named newyorkfiles, seattffiles, and companyfiles.

- * Create a domain controller named dc3.corp.fabrikam.com in Vnet1.
- * Deploy an Azure Virtual Desktop host pool to Vnet1. The Azure Virtual Desktop session hosts will be hybrid Azure AD joined.
- * License all servers for Microsoft Defender for servers.
- * Use Azure Policy to enforce configuration management policies on the servers in Azure and on-premises.

Networking Requirements

Fabrikam identifies the following security requirements:

- * Apply GP04 to the Azure Virtual Desktop session hosts. Ensure that Azure Virtual Desktop user sessions lock after being idle for 10 minutes. Users must be able to control the lockout time manually from their client computer.
- * Ensure that server administrators request approval before they can establish a Remote Desktop connection to an Azure virtual machine. If the request is approved, the connection must be established within two hours.
- * Prevent user passwords from containing all or part of words that are based on the company name, such as Fab, fabrikam or fsbr! |.
- * Ensure that all instances of Webapp1 use the same service account. The password of the service account must change automatically every 30 days.
- * Prevent domain controllers from directly contacting hosts on the internet.

File Sharing Requirements

You need to configure the synchronization of Azure files to meet the following requirements:

- * Ensure that seattlefiles syncs to FS2.
- * Ensure that newyorkfiles syncs to FS1.
- * Ensure that companyfiles syncs to both FS1 and FS2.

NEW QUESTION: 68

Your network contains three Active Directory Domain Services (AD DS) forest as shown in the following exhibit.

The network contains the users shown in the following table.

Name	Domain
User1	east.contoso.com
User2	fabrikam.com

The network contains the security groups shown in the following table.

Name	Type	Domain
Group1	Domain local	west.adatum.com
Group2	Universal	contoso.com
Group3	Universal	east.contoso.com

For each of the following statements, select Yes if the statement is true, Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
You can add User1 to Group1.	☐	☐
You can add User2 to Group3.	☐	☐
You can grant Group2 permissions to the resources in the fabrikam.com domain.	☐	☐

Answer:

Statements	Yes	No
You can add User1 to Group1.	☒	☐
You can add User2 to Group3.	☐	☒
You can grant Group2 permissions to the resources in the fabrikam.com domain.	☒	☐

NEW QUESTION: 69

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant.

You have several Windows 10 devices that are Azure AD hybrid-joined.

You need to ensure that when users sign in to the devices, they can use Windows Hello for Business.

Which optional feature should you select in Azure AD Connect?

- A. Device writeback
- B. Group writeback
- C. Password writeback
- D. Directory extension attribute sync
- E. Azure AD app and attribute filtering

Answer: C (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/windows/security/identity-protection/hello-for-business/hello-hybrid-cert-trust-prereqs>

NEW QUESTION: 70

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant.

You have several Windows 10 devices that are Azure AD hybrid-joined.

You need to ensure that when users sign in to the devices, they can use Windows Hello for Business.

Which optional feature should you select in Azure AD Connect?

- A. Device writeback

- B. Group writeback
- C. Password writeback
- D. Directory extension attribute sync
- E. Azure AD app and attribute filtering

Answer: (SHOW ANSWER)

Hybrid certificate trust deployments need the device write back feature. Authentication to the Windows Server 2016 Active Directory Federation Services needs both the user and the computer to authenticate. Typically the users are synchronized, but not devices. This prevents AD FS from authenticating the computer and results in Windows Hello for Business certificate enrollment failures. For this reason, Windows Hello for Business deployments need device writeback, which is an Azure Active Directory premium feature.
<https://docs.microsoft.com/en-us/windows/security/identity-protection/hello-for-business/hello-hybrid-cert-trust-prereqs>

NEW QUESTION: 71

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com.

in the contoso.com domain, you create two users named Admin1 and Admin2.

You need to ensure that the users can perform the following tasks:

- * Admin1 can create and manage Active Directory sites.
- * Admin2 can deploy domain controller to the east.contoso.com domain.

The solution must use the principle of least privilege.

To which group should you add each user? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

NEW QUESTION: 72

You have on-premises file servers that run Windows Server as shown in the following table.

Name	Relevant folder
Server1	D:\Folder1, E:\Folder2
Server2	D:\Data

You have the Azure file shares shown in the following table.

Name	Location
share1	East US
share2	East US

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint.

You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	☐	☐
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	☐	☐
You can add D:\Data from Server2 as a server endpoint in Group1.	☐	☐

Answer:

You can add share2 as a cloud endpoint in Group1.

You can add E:\Folder2 from Server1 as a server endpoint in Group1.

You can add D:\Data from Server2 as a server endpoint in Group1.

Yes	No

NEW QUESTION: 75

You have an Azure virtual machine named VM1 that has a private IP address only.

You configure the Windows Admin Center extension on VM1.

You have an on-premises computer that runs Windows 11. You use the computer for server management. You need to ensure that you can use Windows Admin Center from the Azure portal to manage VM1.

What should you configure?

- A. an Azure Bastion host on the virtual network that contains VM1.
- B. a private endpoint on the virtual network that contains VM1.
- C. a VPN connection to the virtual network that contains VM1.
- D. a network security group (NSG) rule that allows inbound traffic on port 443.

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 76

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains a server named Server1 that has the DFS Namespaces role service installed. Server1 hosts a domain-based Distributed File System (DFS) Namespace named Files.

The domain contains a file server named Server2. Server2 contains a shared folder named Share1. Share1 contains a subfolder named Folder1.

In the Files namespace, you create a folder named Folder1 that has a target of \\Server2.contoso.com\Share1\Folder1.

You need to configure a logon script that will map drive letter M to Folder1. The solution must use the path of the DFS Namespace.

How should you complete the command to map the drive letter? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

NEW QUESTION: 77

Your company has offices in Boston and Montreal. The offices are connected by using a 10-Mbps WAN link that is often saturated The office in Boston contains the following:

- * An Active Directory Domain Services (AD DS) domain controller named DC1.
- * A server named Server1 that runs Windows Server and has the File Server role installed The office in Montreal contains 20 client computers that run Windows 10 Montreal does NOT have any servers.

The company plans to deploy a new line of business (LOB) application to all the client computers. The installation source files for the application are in \\Server\Apps.

Answer Area

On Server1:

On the client computers:

Enable BranchCache in hosted cache mode.
Enable BranchCache in Distributed Cache mode.
Install the BranchCache for network files role service.

Enable BranchCache in hosted cache mode.
Enable BranchCache in Distributed Cache mode.
Install the BranchCache for network files role service.

Answer:
ANSWER AREA

On Server1:

On the client computers:

Enable BranchCache in hosted cache mode.
Enable BranchCache in Distributed Cache mode.
Install the BranchCache for network files role service.

Enable BranchCache in hosted cache mode.
Enable BranchCache in Distributed Cache mode.
Install the BranchCache for network files role service.

NEW QUESTION: 78

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.

You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: On Server2, you create a conditional forwarder for contoso.local and west.contoso.local. On Server3, you create a conditional forwarder for contoso.local and east.contoso.local.

Does this meet the goal?

A. Yes

B. No

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 79

You plan to deploy an Azure virtual machine that will run Windows Server.

You need to ensure that an Azure Active Directory (Azure AD) user named user1@contoso.com can connect to the virtual machine by using the Azure Serial Console.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Answer:

Answer Area

<https://docs.microsoft.com/en-us/troubleshoot/azure/virtual-machines/serial-console-overview>

NEW QUESTION: 80

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains a DNS server named Server1. Server1 hosts a DNS zone named fabrikam.com that was signed by DNSSEC.

You need to ensure that all the member servers in the domain perform DNSSEC validation for the fabrikam.com namespace.

What should you do?

A. From a Group Policy Object (GPO), modify the Network List Manager policies.

B. On Server1, run the Add-DnsServerTrustAnchorcmdlet.

C. On each member server, run the Add-DnsServerTrustAnchorcmdlet.

D. From a Group Policy Object (GPO), add a rule to the Name Resolution Policy Table (NRPT).

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 81

Hotspot Question

You have a server named Server1 that runs Windows Server. Server1 has a just-a-bunch-of- disks (JBOD) enclosure attached.

You plan to create a storage pool on Server1 and a virtual disk that will use a mirror layout.

You are considering whether to use a two-way or a three-way mirror layout.

What is the minimum number of disks required for each type of mirror layout? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Two-way mirror

	▼
1	
2	
3	
4	
5	
6	

Three-way mirror

	▼
1	
2	
3	
4	
5	
6	

Answer:

Answer Area

Two-way mirror

	▼
1	
2	
3	
4	
5	
6	

Three-way mirror

	▼
1	
2	
3	
4	
5	
6	

Explanation:

Resiliency levels

To create a highly available virtual disk, you need at least one physical disk that satisfies the following requirements:

1. One physical disk is required to create a storage pool.
2. A minimum of two physical disks are required to create a resilient mirror virtual disk.
3. A minimum of three physical disks are required to create a virtual disk with resiliency through parity.
4. Three-way mirroring requires at least five physical disks.
5. Disks must be blank and unformatted. No volume can exist on the disks.

NEW QUESTION: 83

You have a Windows Server container host named Server1 that has a single disk.
On Server1, you plan to start the containers shown in the following table.

Name	Description
Container1	Container1 is a Windows container that contains a web app in development. The container must NOT share a kemel with other containers.
Container2	Container2 is a Linux container that runs a web app. The container requires two static IP addresses.
Container3	Container3 is a Windows container that runs a database. The container requires a static IP address.

Which isolation mode can you use for each container? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Container1:	 Microsoft
	Hyper-V isolation only
	Process isolation only
	Hyper-V isolation or process isolation

Container2:	
	Hyper-V isolation only
	Process isolation only
	Hyper-V isolation or process isolation

Container3:	
	Hyper-V isolation only
	Process isolation only
	Hyper-V isolation or process isolation

Answer:

Container1:	
	Hyper-V isolation only
	Process isolation only
	Hyper-V isolation or process isolation

Container2:	
	Hyper-V isolation only
	Process isolation only
	Hyper-V isolation or process isolation

NEW QUESTION: 84

Your network contains a two-domain on-premises Active Directory Domain Services (AD DS) forest named Contoso.com. The forest contains the domain controllers shown in the following table.

Name	Description	Domain	Active Directory site
DC1	Forest-wide and domain-wide FSMO role holder	contoso.com	Hub
DC2	Domain-wide FSMO role holder	child.contoso.com	Site1
RODC3	Read-only domain controller (RODC)	contoso.com	Site2

You create an Active Directory site named Site3. Site1, Site2 and Site3 each has a dedicated site link to the Hub site.

In Site3, you install a new server named Server1.

You need to promote Server1 to an ROOC in child.contoso.com by using the install from Media (IFM) option. The solution must minimize network traffic.

What should you do? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Server to use to create the IFM source:

Tool to use to create the IFM source:

NEW QUESTION: 86

Hotspot Question

You have on-premises servers that run Windows Server as shown in the following table.

Name	Local content
Server1	D:\Folder1\File1.docx
Server2	D:\Data1\File3.docx

You have an Azure file share named share1 that stores two files named File2.docx and File3.docx.
You create an Azure File Sync sync group that includes the following endpoints:

- share
- D:\Folder1 on Server1
- D:\Data1 on Server2

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer Area

Statements

Yes

No

You can create a file named File2.docx in D:\Folder1 on Server1.

☐☐

You can create a file named File1.docx in D:\Data1 on Server2.

☐☐

File3.docx will sync to Server1.

☐☐

Answer:

Answer Area

NEW QUESTION: 87

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

Name	IP address
VPN1	172.16.0.254
VPN2	131.10.15.254
VPN3	10.10.0.254

You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

Name	: NPSClient1
Address	: 172.16.0.254
AuthAttributeRequired	: False
SharedSecret	: Pa55w.rd
VendorName	: RADIUS Standard
Enabled	: False
Name	: NPSClient2
Address	: 172.16.1.254
AuthAttributeRequired	: False
SharedSecret	: Pa55w.rd
VendorName	: RADIUS Standard
Enabled	: True
Name	: NPSClient3
Address	: 172.16.1.254
AuthAttributeRequired	: False
SharedSecret	: Pa55w.rd
VendorName	: RADIUS Standard
Enabled	: True

VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes If the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area		
Statements		
	Yes	No
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	☐	☐
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	☐	☐
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	☐	☐

Answer:

Answer Area		
Statements		
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	☐	☒
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	☒	☐
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	☐	☒

Explanation
Text, letter Description automatically generated

Statements	Yes	No
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	☐	☒
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	☒	☐
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	☐	☒

NEW QUESTION: 88

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Advanced Security Settings for Folder1

Name: D:\Folder1

Owner: Administrators (SERVER1\Administrators) [Change](#)

Permissions | Share | Auditing | Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

Type	Principal	Access	Inherited from	Applies to
Allow	Administrators (SERVER1\Administrators)	Full control	None	This folder, subfolders and files
Allow	Group1 (ADATUM\Group1)	Read	None	This folder, subfolders and files
Allow	Group2 (ADATUM\Group2)	Write	None	This folder, subfolders and files

[Add](#) [Remove](#) [View](#)

[Enable inheritance](#)

☐ Replace all child object permission entries with inheritable permission entries from this object

[OK](#) [Cancel](#) [Apply](#)

Folder1 is shared by using the following configurations:

The share permissions for Share1 are shown in the following table.

Group	Permission
Group1	Allow – Change
Group3	Allow – Full Control

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can read the files in Share1.	☐	☐
User3 can delete files in Share1.	☐	☐
If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.	☐	☐

Answer:

Statements

Yes

No

User1 can read the files in Share1.

☒☐

User3 can delete files in Share1.

☐☒

If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.

☒☐

NEW QUESTION: 89

You have an on-premises server named Server1 that runs Windows Server.

You have an Azure virtual network that contains an Azure virtual network gateway.

You need to connect only Server1 to the Azure virtual network.

What should you use?

- A. Azure Network Adapter
- B. an ExpressRoute circuit
- C. Azure Extended Network
- D. a Site-to-SiteVPN

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 90

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder 1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Folder1 is shared by using the following configurations

Group	Permission
Group1	Allow - Change
Group3	Allow - Full Control

Path : D:\Folder1
Name : Share1
ShareType : FileSystemDirectory
FolderEnumerationMode : Unrestricted

Statements	Yes	No
User1 can read the files in Share1.	☐	☐
User3 can delete files in Share1.	☐	☐
If User2 connects to \\Server1.adatum.com from File Explorer,	☐	☐

Answer:

Statements	Yes	No
User1 can read the files in Share1.	☒	☐
User3 can delete files in Share1.	☒	☐
If User2 connects to \\Server1.adatum.com from File Explorer,	☒	☐

NEW QUESTION: 91

You have a Windows Server container host named Server 1 and a container image named Image1.

Which parameter should you specify when you run the docker run command?

- Answer: C ([LEAVE A REPLY](#))**

NEW QUESTION: 92

What should you configure? To answer, select the appropriate options in the answer area.

On a Virtual WAN hub:	
	An ExpressRoute gateway
	A virtual network gateway
	An ExpressRoute circuit connection

In the offices:	
	An ExpressRoute circuit connection
	A Site to-Site VPN
	An Azure application gateway
	An on premises data gateway

Answer:

On a Virtual WAN hub:

An ExpressRoute gateway
A virtual network gateway
An ExpressRoute circuit connection

In the offices:

An ExpressRoute circuit connection
A Site to-Site VPN
An Azure application gateway
An on premises data gateway

Reference:

NEW QUESTION: 93

You have on-premises file servers that run Windows Server as shown in the following table.

Name	Relevant folder
Server1	D:\Folder1, E:\Folder2
Server2	D:\Data

You have the Azure file shares shown in the following table.

Name	Location
share1	East US
share2	East US

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint.

You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	☐	☐
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	☐	☐
You can add D:\Data from Server2 as a server endpoint in Group1.	☐	☐

Answer:

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	☒	☐
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	☒	☐
You can add D:\Data from Server2 as a server endpoint in Group1.	☒	☐

NEW QUESTION: 94

You have a server named Server1 that runs Windows Server. Server1 has a just-a-bunch-of-disks (JBOD) enclosure attached.

You plan to create a storage pool on Server1 and a virtual disk that will use a mirror layout.

You are considering whether to use a two-way or a three-way mirror layout.

What is the minimum number of disks required for each type of mirror layout? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

Two-way mirror:

- 1
- 2
- 3
- 4
- 5
- 6

Three-way mirror:

- 1
- 2
- 3
- 4
- 5
- 6

Answer:

Answer Area

Microsoft

Two-way mirror:

- 1
- 2
- 3
- 4
- 5
- 6

Three-way mirror:

- 1
- 2
- 3
- 4
- 5
- 6

NEW QUESTION: 95

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.

You need to ensure that the virtual machines can join Azure AD DS.

Which three actions should perform in sequence? To answer, move the appropriate actions from the list of action of the answer area and arrange them in the correct order.

Actions

- Run the Active Directory Domain Services Installation Wizard.
- Create an Azure virtual network.
- Install the Active Directory Domain Services role.
- Install Azure AD Connect.
- Modify the settings of the Azure virtual network.
- Create an Azure AD DS instance.

Answer Area

Navigation icons: < > << >>

Answer:

Answer Area

- Create an Azure virtual network.
- Create an Azure AD DS instance.
- Modify the settings of the Azure virtual network.

- 1 - Create an Azure virtual network.
- 2 - Create an Azure AD DS instance.
- 3 - Modify the settings of the Azure virtual network.

NEW QUESTION: 96

You plan to deploy an Azure virtual machine that will run Windows Server. The virtual machine will host an Active Directory Domain Services (AD DS) domain controller and a drive named f: on a new virtual disk.

You need to configure storage for the virtual machine. The solution must meet the following requirements

- * Maximize resiliency for AD DS.
- * Prevent accidental data loss.

How should you configure the storage? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Volume for the AD DS database:

Caching configuration for the volume that hosts the database:

Options for Volume for the AD DS database: C, D, F

Options for Caching configuration for the volume that hosts the database: NONE, READ, READ/WRITE

Answer:

Answer Area

Microsoft

Volume for the AD DS database:

C
D
F

Caching configuration for the volume that hosts the database:

NONE
READ
READ/WRITE

NEW QUESTION: 97

SIMULATION

You plan to promote a domain controller named DC3 in a site in Seattle.

You need to ensure that DC3 only replicates with DC1 and DC2 between 8 PM and 6 AM.

To complete this task, sign in the required computer or computers.

Answer:

Step 1: Create a site link between Seattle and the site in which DC1 and DC2 are located (if the site link does not already exist. If the site link already exists, then skip Step 1).

Step 2: To open Active Directory Sites and Services, click Start, click Administrative Tools, and then click Active Directory Sites and Services.
Open Active Directory Sites and Services.

Step 3: In the console tree, click the intersite transport folder that contains the site link for which you are configuring intersite replication availability.

Step 4: In the details pane, right-click the site link whose schedule you want to configure, and then click Properties.

Step 5: Click Change Schedule.

Step 6: Select the block of time during which you want replication to be either available or not available, and then click Replication Not Available or Replication Available, respectively.
Change the schedule to: from 8 PM to 6 AM.

Note: Site link

Site links are Active Directory objects that represent logical paths that the KCC uses to establish a connection for Active Directory replication. A site link object represents a set of sites that can communicate at uniform cost through a specified intersite transport.

All sites contained within the site link are considered to be connected by means of the same network type. Sites must be manually linked to other sites by using site links so that domain controllers in one site can replicate directory changes from domain controllers in another site. Because site links do not correspond to the actual path taken by network packets on the physical network during replication, you do not need to create redundant site links to improve Active Directory replication efficiency.

When two sites are connected by a site link, the replication system automatically creates connections between specific domain controllers in each site that are called bridgehead servers.

NEW QUESTION: 100

You have an Azure subscription. The subscription contains a virtual machine named VM1 that runs Windows Server.

You build an app named App1.

You need to configure continuous integration and continuous deployment (CI/CD) of App1 to VM1.

What should you create first?

- A. an Azure Automation account
- B. a managed identity
- C. an Azure DevOps organization
- D. an App Service Environment

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 101

You deploy a single-domain Active Directory Domain Services (AD DS) forest named contoso.com.

You deploy five servers to the domain. You add the servers to a group named iTFarmHosts.

You plan to configure a Network Load Balancing (NLB) cluster named NLBCluster.contoso.com that will contain the five servers.

You need to ensure that the NLB service on the nodes of the cluster can use a group managed service account (gMSA) to authenticate.

Which three PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Cmdlets

Add-KdsRootKey
Set-KdsConfiguration
Install-ADServiceAccount
Add-ADGroupMember
New-ADServiceAccount
Add-ADComputerServiceAccount

Answer Area

Microsoft

Answer:

Answer Area

New-ADServiceAccount
Microsoft Install-ADServiceAccount
Add-ADComputerServiceAccount

- 1 - New-ADServiceAccount
- 2 - Install-ADServiceAccount
- 3 - Add-ADComputerServiceAccount

NEW QUESTION: 102

You have a Group Policy Object (GPO) named GPO1 that contains user settings only.
You plan to apply GPO1 to a global security group named Group1.
You link GP01 to the domain, and you remove all the permissions granted to the Authenticated Users group.
You need to configure permissions for GP01 to meet the following requirements.

- * GPO1 must apply only to the users in Group 1.
- * The solution must use the principle of least privilege

Answer Area

Group1:	▼ Apply group policy and Read Apply group policy only Read only
Domain Computers:	▼ Apply group policy and Read Apply group policy only Read only

Answer:

ANSWER AREA

Group1:	▼ Apply group policy and Read Apply group policy only Read only
Domain Computers:	▼ Apply group policy and Read Apply group policy only Read only

NEW QUESTION: 103

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. You have an on-premises web app named WebApp1 that only supports Kerberos authentication. You need to ensure that users can access WebApp1 by using their Azure AD account. The solution must minimize administrative effort. What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

In Azure AD:

- The Azure AD Application Proxy connector
- The Azure AD Application Proxy service
- Web Application Proxy

On-premises:

- The Azure AD Application Proxy connector
- The Azure AD Application Proxy service
- Web Application Proxy

Answer:

Answer Area

In Azure AD:

- The Azure AD Application Proxy connector
- The Azure AD Application Proxy service
- Web Application Proxy

On-premises:

- The Azure AD Application Proxy connector
- The Azure AD Application Proxy service
- Web Application Proxy

NEW QUESTION: 104

You need to meet the technical requirements for Server1. Which users can currently perform the required tasks?

- A. Admin1 and Admin3 only
- B. Admin1 Admin2. and Admm3
- C. Admin1 only
- D. Admin3 only

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 105

You want to connect supported Azure and third-party services using a fully managed event- routing service with a publish-subscribe model that simplifies event-based app development.

Which of the following integration tools would you use?

- A. Service Bus
- B. Event Grid
- C. Data Factory
- D. Logic Apps

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 106

Your network contains an on-premises Active Directory Domain Services (AD DS) domain named contoso.com that syncs with an Azure AD tenant. The tenant contains a group named Group1 and the users shown in the following table.

Name	In organizational unit (OU)
User1	OU1
User2	OU2

Domain/OU filtering in Azure AD Connect is configured as shown in the Filtering exhibit. (Click the Filtering tab.)

You review the Azure AD Connect configurations as shown in the Configure exhibit. (Click the Configure tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area		
Statements	Yes	No
User1 can use self-service password reset (SSPR) to reset his password.	☐	☐
If User1 connects to Microsoft Exchange Online, an on-premises domain controller provides authentication.	☐	☐
You can add User2 to Group1 as a member.	☐	☐

Answer:

Answer Area

Statements	Yes	No
User1 can use self-service password reset (SSPR) to reset his password.	☐	☒
If User1 connects to Microsoft Exchange Online, an on-premises domain controller provides authentication.	☐	☒
You can add User2 to Group1 as a member.	☐	☒

Explanation

Answer Area

Statements	Yes	No
User1 can use self-service password reset (SSPR) to reset his password.	☐	☒
If User1 connects to Microsoft Exchange Online, an on-premises domain controller provides authentication.	☐	☒
You can add User2 to Group1 as a member.	☐	☒

NEW QUESTION: 107

You plan to deploy an Azure virtual machine that will run Windows Server.

You need to ensure that an Azure Active Directory (Azure AD) user named user1@contoso.com can connect to the virtual machine by using the Azure Serial Console.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Answer Area

Configure on the Azure virtual machine:	Boot diagnostics with a custom storage account Operating system guest diagnostics A system-assigned managed identity
Assign the following role to User1:	Virtual Machine Contributor Virtual Machine Administrator Login Virtual Machine User Login

NEW QUESTION: 108

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.

You need to ensure that the virtual machines can join Azure AD DS.

Which three actions should perform in sequence? To answer, move the appropriate actions from the list of action of the answer area and arrange them in the correct order.

Actions

Run the Active Directory Domain Services installation wizard.

Create an Azure virtual network.

Install the Active Directory Domain Services role.

Install Azure AD Connect.

Modify the settings of the Azure virtual network.

Create an Azure AD DS instance.

Answer Area

Answer:

Answer Area

Create an Azure virtual network.

Create an Azure AD DS instance.

Modify the settings of the Azure virtual network.

- 1 - Create an Azure virtual network.
- 2 - Create an Azure AD dS instance.
- 3 - Modify the settings of the Azure virtual network.

NEW QUESTION: 109

Your network contains an on -premises Active Directory Domain Services (AD DS) domain named contoso.com The domain contains the objects shown in the following table.

Name	Type
User1	User
Group1	Universal security group
Group2	Domain local security group
Computer1	Computer

You plan to sync contoso.com with an Azure Active Directory (Azure AD) tenant by using Azure AD Connect You need to ensure that all the objects can be used in Conditional Access policies What should you do?

- A. Change the scope of Group2 to Universal
- B. Clear the Configure device writeback option.
- C. Change the scope o' Group1 and Group2 to Global
- D. Select the Configure Hybrid Azure AD join option.

Answer: D (LEAVE A REPLY)

Explanation

Hybrid Azure AD join needs to be configured to enable Computer1 to be used in Conditional Access Policies. Synchronized users, universal groups and domain local groups can be used in Conditional Access Policies.

NEW QUESTION: 110

Case Study 2 - Contoso, Ltd

Overview

Contoso, Ltd. is a company that has a main office in Seattle and two branch offices in Los Angeles and Montreal.

Existing Environment

AD DS Environment

The network contains an on premises Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains two domains named contoso.com and canada.contoso.com.

The forest contains the domain controllers shown in the following table.

Name	Domain	Active Directory site
DC1	contoso.com	Seattle
DC2	contoso.com	Los Angeles
DC3	canada.contoso.com	Montreal
DC4	contoso.com	Montreal
DC5	canada.contoso.com	Seattle

All the domain controllers are global catalog servers.

Server infrastructure

The network contains the servers shown in the following table.

Name	Organizational Unit (OU)	Server role	Domain	Active Directory site
Server1	Member Servers	None	canada.contoso.com	Montreal
Server2	Member Servers	Hyper-V	canada.contoso.com	Montreal
Server3	Member Servers	None	canada.contoso.com	Montreal

A server named Server4 runs Windows Server and is in a workgroup. Windows Firewall on Server4 uses the private profile.

Server2 hosts three virtual machines named VM1, VM2, and VM3.

VM3 is a file server that stores data in the volumes shown in the following table.

Name	File system
C	NTFS
D	NTFS
E	ReFS
F	ExFat

Group Policies

The contoso.com domain has the Group Policies Objects (GPOs) shown in the following table.

Name	Minimum password length	Linked to
GPO1	14	OU1
GPO2	8	Member Servers
Default Domain Policy	10	contoso.com

Existing Identities

The forest contains the users shown in the following table.

Name	In OU	Member of
Contoso\Admin1	Contoso\OU1	Contoso\Enterprise Admins
Contoso\Admin2	Contoso\OU1	Contoso\Domain Admins
Canada\Admin3	Canada\OU2	Canada\Domain Admins
Contoso\User1	Contoso\OU3	Contoso\Domain Users

The forest contains the groups shown in the following table.

Name	Domain	Type
Group1	contoso.com	Universal security group
Group2	contoso.com	Global security group
Group3	contoso.com	Domain local security group
Group4	canada.contoso.com	Global distribution group
Group5	canada.contoso.com	Global distribution group
Group6	canada.contoso.com	Domain local distribution group

Current Problems

When an administrator signs in to the console of VM2 by using Virtual Machine Connection, and then disconnects from the session without signing out, another administrator can connect to the console session as the currently signed in user.

Requirements

Technical Requirements

Contoso identifies the following technical requirements:

Change the replication schedule for all site links to 30 minutes.

Promote Server1 to a domain controller in canada.contoso.com.

Install and authorize Server3 as a DHCP server.

Ensure that User1 can manage the membership of all the groups in Contoso\OU3.

Ensure that you can manage Server4 from Server1 by using PowerShell remoting.
Ensure that you can run virtual machines on VM1.
Force users to provide credentials when they connect to VM2.
On VM3, ensure that Data Deduplication on all volumes is possible.

Question

You need to meet the technical requirements for the site links.
Which users can perform the required tasks?

- A. Admin1 only
- B. Admin1 and Admin3 only
- C. Admin1 and Admin2 only
- D. Admin3 only
- E. Admin1, Admin2 and Admin3

Answer: [\(SHOW ANSWER\)](#)

Membership in the Enterprise Admins group or the Domain Admins group in the forest root domain is required.

NEW QUESTION: 111

You have on-premises file servers that run Windows Server as shown in the following table.
You have the Azure file shares shown in the following table.
You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint.
You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	☐	☐
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	☐	☐
You can add D:\Data from Server2 as a server endpoint in Group1.	☐	☐

Answer:

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	☐	☒
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	☒	☐
You can add D:\Data from Server2 as a server endpoint in Group1.	☒	☐

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-planning>

NEW QUESTION: 112

You have a Windows Server container host named Server 1 and a container image named Image1.

You need to start a container from image1. The solution must run the container on a Hyper-V virtual machine.

Which parameter should you specify when you run the docker run command?

- A. --expose
- B. --privileged
- C. --runtime
- D. --entrypoint
- E. --isolation

Answer: (SHOW ANSWER)

Reference:

<https://docs.docker.com/language/nodejs/run-containers/>

NEW QUESTION: 113

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a user named User1 and the servers shown in the following table.

Name	Server role	DHCP scope
Server1	DHCP Server	Scope1, Scope2
Server2	DHCP Server	Scope3, Scope4

You need to ensure that User1 can manage only Scope1 and Scope3. What should you do?

- A. Implement Windows Admin Center and add connections to Server1 and Server2.
- B. Implement IP Address Management (IPAM).
- C. Add User1 to the DHCP Administrators domain local group.
- D. Add User1 to the DHCP Administrators group on Server1 and Server2.

Answer: C (LEAVE A REPLY)

NEW QUESTION: 114

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Each forest contains a single domain. The domains contain the servers shown in the following table.

Name	Domain	Description
Server1	contoso.com	Hosts a Windows Admin Center gateway
Server2	fabrikam.com	Hosts resources that will be managed remotely by using Windows Admin Center on Server1

You need to configure resources based constrained delegation so that the users In contoso.com can use Windows Admin Center on Server) to connect to Server? How should you complete the command? To answer, select the appropriate options in the answer are a. NOTE: Each correct selection is worth one point.

Answer Area

Set-ADComputer -Identity

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

-PrincipalsAllowedToDelegateToAccount

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

Answer:

Answer Area

Set-ADComputer -Identity

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

-PrincipalsAllowedToDelegateToAccount

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

NEW QUESTION: 115

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com The domain contains a server named Server1 and the users shown In the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder 1 are configured as shown in the Permissions exhibit. (Click the Permissions lab.)

Advanced Security Settings for Folder1

Name: D:\Folder1

Owner: Administrators (SERVER1\Administrators) Change

Permissions

Share

Auditing

Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

Type	Principal	Access	Inherited from	Applies to
Allow	Administrators (SERVER1\Administrators)	Full control	None	This folder, subfolders and files
Allow	Group1 (ADATUM\Group1)	Read	None	This folder, subfolders and files
Allow	Group2 (ADATUM\Group2)	Write	None	This folder, subfolders and files

Add

Remove

View

Enable inheritance

☐ Replace all child object permission entries with inheritable permission entries from this object.

OK

Cancel

Apply

Folder1 is shared by using the following configurations

Group	Permission
Group1	Allow - Change
Group3	Allow - Full Control

Path : D:\Folder1
Name : Share1
ShareType : FileSystemDirectory
FolderEnumerationMode : Unrestricted

Answer Area

NEW QUESTION: 116

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com and the servers shown in the following table.

Name	Domain	Description
DC1	contoso.com	Has the schema master, infrastructure master, and domain naming master roles
DC2	east.contoso.com	Has the PDC emulator and RID master roles and is a global catalog server
Server1	contoso.com	Has the File Server, DFS Namespaces, and DFS Replication server roles

You need to create a folder for the Central Store to manage Group Policy template files for the entire forest. What should you name the folder, and on which server should you create the folder? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

 Microsoft

Name:

PolicyDefinitions

CentralDefinitions

PolicyDefinitions

TemplateDefinitions

These are the selections for Name:

DC1, DC2, and Server1

NEW QUESTION: 117

You have on-premises servers that run Windows Server as shown in the following table.

 Name	Local content
Server1	D:\Folder1\File1.docx
Server2	D:\Data1\File3.docx

You have an Azure file share named share1 that stores two files named File2.docx and File3.docx.

You create an Azure File Sync sync group that includes the following endpoints:

share

D:\Folder1 on Server1

D:\Data1 on Server2

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can create a file named File2.docx in D:\Folder1 on Server1.	☐	☐
You can create a file named File1.docx in D:\Data1 on Server2.	☐	☐
File3.docx will sync to Server1.	☐	☐

Answer:

Statements	Yes	No
You can create a file named File2.docx in D:\Folder1 on Server1.	☒	☐
You can create a file named File1.docx in D:\Data1 on Server2.	☒	☐
File3.docx will sync to Server1.	☐	☒

Reference:

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-introduction>

NEW QUESTION: 118

You need to sync files from an on-premises server named Server1 to Azure by using Azure File Sync.

You have a cloud tiering policy that is configured for 30 percent free space and 70 days.

Volume f on Server1 is 500 GB.

A year ago, you configured E:\Data on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Name	Size	Last accessed
File1	200 GB	2 days ago
File2	100 GB	10 days ago
File3	200 GB	60 days ago
File4	50 GB	100 days ago

Volume E does NOT contain any other files.

Where are File1 and File3 located? To answer, select the appropriate options in the answer area.

Answer Area

File1:

Server1 only

The Azure file share only

Server1 and the Azure file share

File3:

Server1 only

The Azure file share only

Server 1 and the Azure file share

Answer:
Answer Area

NEW QUESTION: 121

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com.

The domain contains a 'He server named Server1 and three users named User1. User2 and User), Server1 contains a shared folder named Share1 tha1 has the following configurations:

```

ShareState      : Online
AvailabilityType : NonClustered
FolderEnumerationMode : AccessBased
CachingMode     : Manual
LeasingMode     : Full
SmbInstance     : Default
CompressData    : False
ContinuouslyAvailable : False
EncryptData     : False
Name            : Share1
Path            : E:\Share1
ShadowCopy      : False
  
```

The share permissions for Share1 are configured as shown in the Share Permissions exhibit. (Click the Share Permissions tab.) Share! contains a file named File1.txt. The advanced security settings for File1.txt are configured as shown in the File Permissions exhibit. (Click the File Permissions tab.) For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: f ach correct selection is worth one point.

Statements	Yes	No
When User1 connects to \\Server1.adatum.com\Share1\, the user can take ownership of File1.txt.	☐	☐
When User2 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	☐	☐
When User3 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	☐	☐

Answer:

Answer Area		
Statements	Yes	No
When User1 connects to \\Server1.adatum.com\Share1\, the user can take ownership of File1.txt.	☐	☒
When User2 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	☒	☐
